This book consists of the hydrogeochemical study of the springs of the Sicilian territory used for drinking water purposes One of the most important issues in the environmental field is the protection of water resources and in particular the safeguarding of water intended for drinking water use Water resources need a careful prevention of pollution starting from multidisciplinary studies geology hydrogeology geochemistry geophysics to understand the territory in order to highlight vulnerable areas and then plan where necessary monitoring activities for the control and protection of the resource The reference is the Piano Regolatore degli Acquedotti PRGA of Sicily Italy updated in November 2010 which lists all the springs subdivided by province a total of 1014 currently used to supply water to Sicilian aqueducts With regard to the geochemical part the studies carried out by the INGV Sezione di Palermo for the Water Protection Plan for Sicily 2004 2005 were used as basic data The study of the chemical characteristics of groundwater is of fundamental importance from a hydrogeological point of view as it allows the origin of the water and its evolution to be reconstructed Springs as a groundwater resource are of considerable importance in relation to the availability of water resources due to the general decrease in precipitation In the first part of the book all the existing data flow rates geochemical parameters water quality etc are collected and subsequently transferred to GIS software after appropriate evaluations on the validity of the acquired data Considering that the subject is quite delicate and involves various aspects compliance with regulations vulnerability of groundwater anthropogenic pollution etc

carrying out a purely scientific study allows groundwater to be placed in a broader context than that of legislation aimed exclusively at compliance with the regulations in force

Tarquin Teale a sedimentology stratigraphy postgraduate student at the Royal School of Mines was killed in a road accident south of Rome on 17 October 1985 Premature death is a form of tragedy which can make havoc of the ordered progress which we try to impose on our lives As parents relatives and friends we all know this and yet somehow when it touches our own world there is no consolation to be found anywhere In Tarquin s case the enormity of the loss felt by those of us who knew him can barely be expressed in words Tarquin had everything which we aspire to His fellow graduate students envied his dramatic progress in research We his advisors in appreciating this progress marvelled at how refreshingly rare it was to see such precocious talent combined with such a caring modest and well balanced personality He was des tined for the highest honours in geoscience and there is no doubt that he would have lived a life had he been granted the chance which would have spread colour intellectual insight and goodness
