Novel Bioremediation Processes for Treatment of Seleniferous Soils and Sediment Shrutika Wadgaonkar, 2018-10-26 The aim of this Ph D was to develop a technology for the remediation of seleniferous soils sediments and to explore microbial reduction of selenium oxyanions under different respiration conditions and bioreactor configurations Seleniferous soil collected from the wheat grown agricultural land in Punjab India was characterized and its soil washing was optimized by varying parameters where addition of oxidizing agents showed a maximum selenium removal efficiency Aquatic plants *Lemna minor* and *Egeria densa* were used to study phytoremediation of the selenium rich soil leachate containing oxidizing agents

Additionally migration of the soluble selenium fraction from the upper to the lower layers and its subsequent reduction and accumulation in the lower layers of the soil column was observed during soil flushing Furthermore the soil leachate containing selenium oxyanions obtained from soil washing was treated in a UASB reactor by varying the organic feed Ex situ bioremediation of selenium oxyanions was studied under variable conditions An aerobic bacterium *Delftia lacustris* capable of transforming selenate and selenite to elemental selenium was isolated and characterized Anaerobic bioreduction of selenate coupled to methane oxidation was investigated in serum bottles and a biotrickling filter using marine sediment as inoculum Finally the effect of contamination of other chalcogen oxyanions tellurium on selenium bioreduction was studied in a continuous system UASB reactor
