*Handbook of Adolescent Health Psychology* William T. O'Donohue, Lorraine T. Benuto, Lauren Woodward Tolle, 2014-07-08

Adolescence is a pivotal period of development with respect to health and illness. It is during adolescence that many positive health behaviors are consolidated and important health risk behaviors are first evident; thus, adolescence is a logical time period for primary prevention. In addition, the predominant causes of morbidity and mortality in adolescence are quite different from those of adults, indicating that early identification and treatment of adolescent health problems must be directed to a unique set of targets in this age group. Moreover, because of the particular developmental issues that characterize adolescence, intervention efforts designed for adults are often inappropriate or ineffective in an adolescent population. Even when chronic illnesses are congenital or begin in childhood, the manner in which the transition from childhood to adolescence to young adulthood is negotiated has important implications for disease outcomes throughout the remainder of the person's life span. Organized in five major sections: General Issues, Developmental Issues, Treatment and Training, Mental Health, and Physical Health, and 44 chapters, *Handbook of Adolescent Health Psychology* addresses the common and not so common health issues that tend to affect adolescents. Coverage includes: Context and perspectives in adolescent health psychology; Health literacy, health maintenance, and disease prevention in adolescence; Physical disorders such as asthma, obesity, physical injury, and chronic pain; Psychological disorders such as substance abuse, attention deficit hyperactivity disorder, depression, and eating disorders; Congenital chronic diseases such as type 1 diabetes and spina bifida. *Handbook of Adolescent Health Psychology* is the definitive reference for pediatricians, family physicians, health psychologists, clinical social workers, rehabilitation specialists, and all practitioners and researchers working with adolescents.

DiClemente, William B. Hansen, Lynn E. Ponton, 2013-11-21 Adolescence is a developmental period of accelerating physical psychological social cultural and cognitive development often characterized by confronting and surmounting a myriad of challenges and establishing a sense of self identity and autonomy It is also unfortunately a period fraught with many threats to the health and well being of adolescents and with substantial consequent impairment and disability Many of the adverse health consequences experienced by adolescents are to a large extent the result of their risk behaviors Many adolescents today and perhaps an increasing number in the future are at risk for death disease and other adverse health outcomes that are not primarily biomedical in origin In general there has been a marked change in the causes of morbidity and mortality among adolescents Previously infectious diseases accounted for a disproportionate share of adolescent morbidity and mortality At present however the overwhelming toll of adolescent morbidity and mortality is the result of lifestyle practices ***Handbook of Pediatric and Adolescent Health Psychology*** Anthony J. Goreczny, Michel Hersen, 1999 Twenty eight articles written by professionals in children's health psychology review the literature on topics related to various diseases and disorders anorexia diabetes headache burns cystic fibrosis and asthma addiction health promotion e.g. nutrition and food choice behavior exercise *International Handbook on Adolescent Health and Development* Andrew L. Cherry, Valentina Baltag, Mary E. Dillon, 2016-11-21 This comprehensive reference uses an ecological perspective to sort out the complex mix of biological psychological social and other factors influencing adolescent health as well as shaping professional responses to the needs of adolescents Describing critical concerns at the global level and innovative strategies from selected countries the book urges readers to develop and support practices and policies to enhance optimal youth development Expert coverage centers on key areas the global state of adolescent health and development adolescent health issues and public health answers making health systems more responsive to youth and improving school health services And bedrock themes such as social determinants of health young people's right to health care and health and gender disparities are discussed throughout these chapters Included among the topics The epidemiology of adolescent health Adolescent sexual health and sexuality education Restorative justice and the mental wellbeing of adolescents Critical issues in adolescent nutrition needs and recommendations Towards an adolescent competent workforce Pairing children with health services the changing role of school health services in the 21st century The *International Handbook on Adolescent Health and Development* is essential to medical schools public schools and college libraries

draws from the research and theory of many disciplines in order to show psychologists how psychology and health affect each other      **Control Theories of Crime and Delinquency** Chester L. Britt,Michael R. Gottfredson,2011-12-31 For the past twenty to thirty years control theories of crime have been at the center of theoretical development in criminology Key to the control theory perspective is the notion that crime is an inherently individual act and its explanation requires that we focus on the characteristics of individuals who commit crimes Consequently control theory focuses on such issues as self control and social control The contributions to this volume explicate and extend the application of control theory It is divided into three general areas Part 1 focuses on key assumptions and components of control theories Contributors discuss the notion of learning or socialization in the context of control theory and the effects that families peers and the criminal justice system have on self control social ties and criminal behavior Part 2 applies control theory to areas typically assumed to be out of the domain of self control theory and social control theory such as gender differences in crime domestic violence and group crime Considering control theory s emphasis on explaining individual criminal acts these chapters suggest an interesting area of development by highlighting the possibility that differences in crime across or within groups may begin with individual characteristics and then making inferences about groups and group processes Part 3 approaches the explanation of crime cross nationally and at the macro level Although the authors take different approaches they all illustrate that a theory of crime does not require culture specific elements in order to be a valid cross cultural explanation Contributors to this volume include Robert Agnew Todd Armstrong Leana Allen Bouffard Augustine Brannigan Chester Britt Barbara Costello Maja Dekovic Matt DeLisi Michael Gottfredson Henriette Haas Kelly H Hardwick Travis Hirschi Marianne Junger Martin Killias Helen Mederer Kevin Thompson and Alexander Vazsonyi      The Transition of Respiratory Care: from Child to Adult Alexandra M. ## **Evidence-Based Behavioral Health Practices in Pediatric**

**Specialty Settings** Alexandros Maragakis, Mari Janikian, 2024-10-28 As the field of behavioral health continues to evolve beyond the confines of traditional outpatient office settings there is a growing need for providers who are adept at delivering evidence based services across various specialty environments This need is particularly pronounced when it comes to pediatric populations where the consequences of unidentified or untreated behavioral health issues can be severe and long lasting Recognizing these challenges this book edition aims to facilitate workforce and skills development for professionals working in multiple specialty settings where pediatric behavioral health concerns frequently arise The text will serve as a comprehensive resource for supervisors and trainees emphasizing a discrete skill and competency based approach tailored to the unique demands of each setting By focusing on the development of specific competencies the text will ensure that providers are equipped to address the diverse needs of pediatric patients effectively This includes settings such as schools hospitals primary care clinics and community based programs where early identification and intervention are crucial In schools for example behavioral health providers need to be proficient in collaborating with educators and understanding the educational impacts of behavioral health issues They must also be skilled in implementing school wide interventions and working directly with students who exhibit behavioral or emotional difficulties In hospital settings providers must be prepared to address the complex interplay between physical and mental health often working as part of a multidisciplinary team to provide holistic care to young patients Primary care clinics represent another critical setting where behavioral health concerns are often first identified Providers in these environments need to be skilled in integrating behavioral health services into routine medical care conducting screenings and offering brief interventions Community based programs on the other hand require providers to engage with diverse populations often in under resourced areas necessitating a high degree of cultural competence and adaptability Overall this text will highlight the importance of specialized training and continuous professional development to meet the evolving needs of pediatric populations in various specialty settings By promoting a competency based approach it will empower providers to deliver high quality evidence based care ultimately improving outcomes for children and adolescents facing behavioral health challenges
