Pore Scale Geochemical Processes Carl Steefel, Simon Emmanuel, Lawrence Anovitz, 2015-09-25 This Reviews in Mineralogy Geochemistry volume includes contributions that review experimental characterization and modeling advances in our understanding of pore scale geochemical processes. The volume had its origins in a special theme session at the 2015 Goldschmidt Conference in Prague. From a diversity of pore scale topics that ranged from multi scale characterization to modeling this work

summarizes the state of the science in this subject Topics include modification of thermodynamics and kinetics in small pores chemo mechanical processes and how they affect porosity evolution in geological media small angle neutron scattering SANS techniques how isotopic gradients across fluid mineral boundaries can develop and how these provide insight into pore scale processes Information on an important class of models referred to as pore network and much more The material in this book is accessible for graduate students researchers and professionals in the earth material environmental hydrological and biological sciences The pore scale is readily recognizable to geochemists and yet in the past it has not received a great deal of attention as a distinct scale or environment that is associated with its own set of questions and challenges Is the pore scale merely an environment in which smaller scale molecular processes aggregate or are there emergent phenomena unique to this scale Is it simply a finer grained version of the continuum scale that is addressed in larger scale models and interpretations The scale is important because it accounts for the pore architecture within which such diverse processes as multi mineral reaction networks microbial community interaction and transport play out giving rise to new geochemical behavior that might not be understood or predicted by considering smaller or larger scales alone Engineering Methodologies for Medicine and Sports Roberto Montanari, Maria Richetta, Massimiliano Febbi, Enrico Maria Staderini, 2024-07-18 This book presents the proceedings of the International Workshop on Engineering Methodologies for Medicine and Sports EMMS held in Rome Italy on February 7 9 2024 It includes peer reviewed papers on emerging engineering methodologies applied to biomedicine and sports discussing topics such as advanced biomaterials biodegradable implants additive manufacturing of prosthesis surface design fabrication of bioreactors design of biomechanical devices rehabilitation and prevention AI applications to medicine biosensors medical signal analysis medical sensors detection and monitoring of substances dangerous for health biomechanics assessment of sport performance sport activity as a diagnostic device A valuable up to date resource it offers an essential overview of the subject for scientists and practitioners alike and will inspire further investigations and research
