The Brain, a Galaxy in Your Head David Fortin, 2025-08-29 The human brain is the most complex object known in the universe It is said that there are as many stars in the milky way as there are neurons in the brain Interestingly the parallel between the universe and the brain goes further as the matter density distribution in the universe would resemble that in the brain no less This book summarizes the current knowledge on the brain extending this knowledge into philosophical considerations It first retraces historical milestones in the discovery of the brain followed by a detailed and balanced account on current knowledge on the subject Admittedly the goal here is to summarize intelligibly the knowledge on the subject without going too much into details The next step in this odyssey is then to consider more philosophical implications on the brain hence we will discuss one of the greatest mysteries of all the consciousness The last chapter will draw the line between the biological brain and AI which we will see have strictly nothing in common Finally we will study the impacts of digital technologies on our brains This is the perfect guide to familiarise yourself with the marvel within your head your brain

Path-Breaking Work in Plastic and Reconstructive Microsurgery Doina Dumitrescu-Ionescu, 2020-02-25 Path Breaking Work in Plastic and Reconstructive Microsurgery by Dr Doina Dumitrescu Ionescu was reviewed by David Soutar for The Royal College of Surgeons of England This is a refreshingly original and unusual text It is a testament to the life work of the author and her struggle to develop clinical microsurgery in Rumania It takes the reader on a journey starting with learning the basic techniques of microsurgery laboratory and experimental research teaching and training It then progresses to the building of an infrastructure for development and clinical practice the maintenance of meticulous records and the evaluation of results As such the book is a very personal account written in an informal style so that the reader can follow the author s own development and experience The format is unusual beginning

with the author's philosophy for developing reconstructive microsurgery. It then covers personal techniques developed for peripheral techniques developed for peripheral nerve repairs and microvascular anastomosis. It is clear from early on in this book that the author's main interest lies in the management of peripheral nerves particularly in the limbs. There is a section on reconstructive microsurgery of the brachial plexus following trauma and a section on limb replantation. Says the author: 'The reconstructive microsurgery experience helped me to modernize reparative plastic surgery in Romania in reconstructive plastic surgery and reconstructive microsurgery by radically changing the surgical approach. This allowed also for new procedures in Dupuytren's Disease, Volkmann and post burn contractures approach revolutionizing everything that was repair surgery of any extremity cephalic superior inferior but also the extension of reconstructions in the large defects of supraskeletal soft parts'.
