Volume 4 seeks to make sense of the interplay of domestic transnational and international dynamics in explaining conflict and cooperation over water through single or comparative case studies as well as analyses of on the ground transboundary water management experiences arising from these complex political dimensions.

Oil States in the New Middle East Kjetil Selvik, Bjørn Olav Utvik, 2015-07-16 Oil has been central to regime survival for oil states across the Arabian Peninsula and has been at the heart of their attempts to defuse the wave of Arab revolutions. However, in 2011, revolution hit Libya, the most oil dependent regime in the Middle East. The political storm winds that have swept this region have thrown into doubt the resilience of Arab rentier states and highlight how the political effects of oil vary across the oil producing countries. *Oil States in the New Middle East* brings together leading experts to critically assess the centrality of oil and the relevance of Rentier State Theory in light of the post 2011 upheaval across the Middle East and North Africa. It combines overall reflections on the political dynamics in oil states with focused case investigations of individual countries. Taking as its starting point the centrality of oil in explanations of regime survival, the book analyses how the oil states have responded to and fared throughout the Arab popular upheavals, resulting in a critical assessment of the continued relevance of Rentier State Theory. While observers have asked how the uprisings varied between oil and non oil states, this book turns the comparative focus inward, arguing for a more fine grained understanding of the political effects of oil in different oil producing countries. This book would be of interest to students and scholars of Middle East, North Africa and Gulf Studies, Oil and Politics, as well as Comparative Politics and International Political Economy.

A Liberal Actor in a Realist World Andreas Goldthau, Nick Sitter, 2015-08-13 Since 1992, the European Union has put liberalisation at the core of its energy policy agenda. This aspiration was very much in line with an international political economy driven by the neo liberal Washington consensus. The central challenge for the EU is that the energy world has changed while the EU has not. The rise of Asian energy consumers, China and India, more assertive energy producers, Russia, and the threat of climate change have securitized the IPE of energy and turned it more realist. The main research question is therefore: What does a liberal actor do in a realist world? The overall answer, as far as the EU is concerned, is that it approaches energy challenges as a problem of market failure, imperfect competition on the supply side, inadequate supply of public goods on the demand side, and in terms of infrastructure and large externalities that arise both from non energy events and from large scale consumption of fossil fuels. *A Liberal Actor in a Realist World* assesses the

changing nature of the global political economy of energy and the European Union's response and the external dimension of the regulatory state. The book concludes that the EU's soft power has a hard edge which is derived primarily from its regulatory power. This works best when it targets companies rather than governments and it is more effective in the Near Abroad than at the global level. This makes the EU emerge as an actor in its own right in the global political economy of energy.

Routledge Handbook of Persian Gulf Politics Mehran Kamrava, 2020-05-31

The *Routledge Handbook of Persian Gulf Politics* provides a comprehensive and up-to-date analysis of Persian Gulf politics, history, economics, and society. The volume begins its examination of Ottoman rule in the Arabian Peninsula, exploring other dimensions of the region's history up until and after independence in the 1960s and 1970s. Featuring scholars from a range of disciplines, the book demonstrates how the Persian Gulf's current complex politics is a product of interwoven dynamics rooted in historical developments and memories, profound social, cultural, and economic changes underway since the 1980s and the 1990s, and inter-state and international relations among both regional actors and between them and the rest of the world. The book comprises a total of 36 individual chapters divided into the following six sections: Historical Context, Society and Culture, Economic Development, Domestic Politics, Regional Security Dynamics, and The Persian Gulf and the World. Examining the Persian Gulf's increasing importance in regional politics, diplomacy, economics, and security issues, the volume is a valuable resource for scholars, students, and policy makers interested in political science, history, Gulf studies, and the Middle East.

The Economics of the Oil and Gas Industry Joshua Yindenaba Abor, Amin Karimu, Runar Brännlund, 2023-03-06

Energy is a key resource for transformational development globally. Oil and gas continue to play a key role in this sector irrespective of the gradual transition towards renewables and will continue to do so in most developing and emerging economies in the near future. The industry is complex and highly capital intensive, not only with significant risk but also with significant benefits. Such a complex but important sector is generally not well understood, both in academic and policy circles. This book fills this void by serving as a comprehensive reference to the oil and gas sector with a focus on emerging markets and developing economies (EMDEs). It offers in-depth coverage of the critical and contemporary issues in the economics of the oil and gas industry by carefully integrating the relevant theoretical underpinnings and practical policy issues across the value chain of the industry in relation to the development, fiscal arrangements, and the economic and financing aspects of the industry. These insights will significantly deepen the understanding of the industry and extend knowledge of the sector in ways that existing books do not. The book includes relevant cases and thus will serve as a valuable resource for students taking courses in market analysis of the oil and gas industry, energy economics, development economics, and finance, environmental and resource economics, the political economy of the extractive industry, and development studies. Researchers and practitioners

working in these areas will also find the book to be a useful reference guide

Sustainability in the Oil and Gas Sector Thomas Walker, Sergey Barabanov, Maya Michaeli, Victoria Kelly, 2024-05-21 The push for sustainability in the oil and gas sector has taken center stage in both climate action debates and mitigation adaptation efforts in recent decades As the global mission for sustainable energy increasingly moves away from oil and gas as primary resources the study of sustainability in the industry is often posited as counterintuitive However it is imperative to unearth methods to integrate sustainability efforts in the oil and gas industry as it will likely retain its prominence in the foreseeable future This book ignites academic discussion regarding ongoing and necessary mitigation and adaptation strategies in the oil and gas industry that will help address the ongoing climate crisis The chapters featured in this collection pose several important queries regarding current sustainability efforts in the oil and gas industry and propose avenues for improvement In particular they focus on carbon emissions in exploration and production land use patterns and biodiversity and ethics in the oil and gas industry Working against the background of the UN Agenda 2030 and Sustainable Development Goals this book will be of great interest to academics and students of sustainability strategies energy innovation and business ethics as well as policymakers and practitioners tasked with analyzing these areas

The Oil Business and the State Øystein Noreng, 2021-10-18 National oil companies are big business with about 80 percent of the world's proven oil reserves and they are crucial to the world's energy supplies They are giants some of the world's largest companies measured by market capitalisation cash flow and investment Little is known about their modus operandi how they make decisions about investment and production or about relations with their government owners However it is known that they conduct business with a political mandate often with multiple long term objectives broadly defined and hard to quantify Unclear mandates give national oil companies leeway to pursue their own distinctive interests apart from those of the government owner As

investors governments are less zealous than private investors They generally observe multiple objectives not only return on capital Therefore the senior management of national oil companies enjoy more discretionary power and consider longer time horizons than their counterparts in the private sector The Oil Business and the State explains the practice of state ownership in a capital intensive industry with high risks and high return and how these companies act in a market with imperfect competition This book looks to give readers more insight into the oil industry into the background of oil exporting countries as well as the economic and political challenges confronting them including problems of state ownership The book discusses wider consequences of China replacing the United States as the world s leading oil importer It will be of interest to researchers academics and students in the fields of international business management history corporate governance political economy and economic development of oil rich countries

The Rise and Fall of OPEC in the Twentieth Century Giuliano Garavini, 2019-07-25 The Organization of the Petroleum Exporting Countries OPEC is one of the most recognizable acronyms among international organizations It is mainly associated with the oil shock of 1973 when prices of petroleum quadrupled and industrialized countries and consumers were forced to face the limits of their development model This is the first history of OPEC and of its members written by a professional historian It carries the reader from the formation of the first petrostate in the world Venezuela in the late 1920s to the global ascent of petrostates and OPEC during the 1970s to their crisis in the late 1980s and early 1990s Formed in 1960 OPEC was the first international organization of the Global South It was perceived as acting as the economic spearhead of the Global South and acquired a role that went far beyond the realm of oil politics Petrostates such as Venezuela Nigeria Algeria Saudi Arabia Iraq and Iran were and continue to be key regional actors and their enduring cooperation defying wide political and cultural differences and even wars speaks to the centrality of natural resources in the history of the twentieth century and to the underlying conflict between producers and consumers of these natural resources

Energy Security and Environmental Sustainability in the Western Hemisphere Bruce M. Bagley, Remi B. Piet, Marcelo R. S. Zorovich, 2017-02-03 In light of the rapid fluctuations in oil prices and subsequent impact on the stability and economic perspectives of energy producing and energy importing states in the

Western Hemisphere this book stresses the urgency to integrate sustainability at the very core of national energy security strategies From Canada to Argentina this edited volume analyzes a series of case studies and diverging paradigms across the continent It underlines how the relatively recent exploitation of unconventional energy sources in North America and the resulting impact on prices impact the geopolitical concerns of traditional producers It also explains how much energy strategies are central to the development of national economies and the stability of their society Highlighting the shortcomings in several countries even at a time of high prices the volume makes the case for an inclusive and holistic approach to energy security that would integrate environmental concerns at its very core This edited volume also explains how this new energy independence of the western Hemisphere affects its foreign policy with the main international actors in the field of energy whether traditional producers or consumers Finally it provides key insights on successful strategy towards the development of alternative sources of energy
