The Oxford Handbook of Personality and Social Psychology Kay Deaux, Mark Snyder, 2018-10-02 The second edition of The Oxford Handbook of Personality and Social Psychology beautifully captures the history current status and future prospects of personality and social psychology Building on the successes and strengths of the first edition this second edition of the Handbook combines the two fields of personality and social psychology into a single integrated volume offering readers a unique and generative agenda for psychology Over their history personality and social psychology have had varying relationships with each other sometimes highly overlapping and intertwined other times contrasting and competing Edited by Kay Deaux and Mark Snyder this Handbook is dedicated to the proposition that personality and social psychology are best viewed in conjunction with one another and that the synergy to be gained from considering links between the two fields can do much to move both areas of research forward in order to better enrich our collective understanding of human nature Contributors to this Handbook not only offer readers fascinating examples of work that cross the boundaries of personality and social psychology but present their work in such a way that thinks deeply about the ways in which a unified social personality perspective can provide us with a greater understanding of the phenomena that concern psychological investigators The chapters of this Handbook effortlessly weave together work from both disciplines not only in areas of longstanding concern but also in newly emerging fields of inquiry addressing both distinctive contributions and common ground In so doing they offer compelling evidence for the power and the potential of an integrated approach to personality and social psychology today

The Oxford Handbook of Polling and Survey Methods Lonna Rae Atkeson, R. Michael Alvarez, 2018-07-25 The methodologies used to study public opinion are now in flux The primary polling method of the last half century the telephone survey is rapidly becoming obsolete as a data collection method At the same time new methods of contacting potential respondents and obtaining their response are appearing providing a variety of options for scholars and practitioners Generally speaking we are moving from a polling world that was largely interviewer driven over the phone and face to face to predominantly interviewer driven self administered poll environments New methods of data collection however must still deal with fundamental questions to polling methodology and total survey error including sampling selection bias non response error poststratification weighting and questionnaire design features The Oxford Handbook on Polling and Survey Methods brings together a unique mixture of academics and practitioners from various backgrounds academic disciplines and experiences In some sense this is reflective of the interdisciplinary nature of the polling and survey industry polls and surveys are widely used in academia government and the private sector Designing implementing and

analyzing high quality accurate and cost effective polls and surveys requires a combination of skills and methodological perspectives Despite the well publicized issues that have cropped up in recent political polling a great deal is known today about how to collect high quality polling and survey data even in complex and difficult environments Divided into four main sections the Handbook draws on the existing research and explores data collection methods It then addresses data analysis and the methods available for combining polling data with other types of data The next section covers analytic issues including the new approaches to studying public opinion ie social media the analysis of open ended questions using text analytic tools and data imputation The final section focuses on the presentation of polling results an area where there is a great deal of innovation A comprehensive overview of the topic this volume highlights current polling trends provides ideas for the development of new and better approaches for measuring modeling and visualizing public opinion and social behavior
