Evolutionary Thinking Across Disciplines Agathe du Crest, Martina Valković, André Ariew, Hugh Desmond, Philippe Huneman, Thomas A. C. Reydon, 2023-06-26 This volume aims to clarify the epistemic potential of applying evolutionary thinking outside biology and provides a survey of the current state of the art in research on relevant topics in the life sciences the philosophy of science and the various areas of evolutionary research outside the life sciences By bringing together chapters by evolutionary biologists systematic biologists philosophers of biology philosophers of social science complex systems modelers psychologists anthropologists economists linguists historians and educators the volume examines evolutionary thinking within and outside the life sciences from a multidisciplinary perspective While the chapters written by biologists and philosophers of science address theoretical aspects of the guiding questions and aims of the volume the chapters written by researchers from the other areas approach them from the perspective of applying evolutionary thinking to non biological phenomena Taken together the chapters in this volume do not only show how evolutionary thinking can be fruitfully applied in various areas of investigation but also highlight numerous open problems unanswered questions and issues on which more clarity is needed As such the volume can serve as a starting point for future research on the application of evolutionary thinking across disciplines

evolving and this book presents the details of the core of modern Darwinism and its latest developmental directions. The authors present current scientific work addressing theoretical problems and challenges in four sections beginning with the concepts of evolution theory its processes of variation heredity selection adaptation and function and its patterns of character species descent and life. The second part of this book scrutinizes Darwinism in the philosophy of science and its usefulness in understanding ecosystems whilst the third section deals with its application in disciplines beyond the biological sciences including evolutionary psychology and evolutionary economics Darwinian morality and phylolinguistics. The final section addresses anti Darwinism the creationist view and issues around teaching evolution in secondary schools. The reader learns how current experimental biology is opening important perspectives on the sources of variation and thus of the very power of natural selection. This work examines numerous examples of the extension of the principle of natural selection and provides the opportunity to critically reflect on a rich theory on the methodological rigour that presides in its extensions and exportations and on the necessity to measure its advantages and also its limits. Scholars interested in modern Darwinism and scientific research its concepts research programs and controversies will find this book an excellent read and those considering how Darwinism might evolve how it can apply to the human sciences and other disciplines beyond its origins will find it particularly valuable. Originally produced in French *Les Mondes Darwiniens* the scope and usefulness of the book have led to the production of this English text to reach a wider audience. This book is a milestone in the impressive penetration by Francophone scholars into the world of Darwinian science its historiography and philosophy over the last two decades. Alex Rosenberg R Taylor Cole Professor of Philosophy Duke University. Until now this useful and comprehensive handbook has only been available to francophones. Thanks to this invaluable new translation this collection of insightful and original essays can reach the global audience it deserves. Tim Lewens University of Cambridge.
