Never having liked such foods as beer and chicken nuggets, she suddenly started craving them. After an extraordinary dream, she seeks out the family of her donor, a teenaged boy who died in a motorcycle accident, and learns that it is indeed possible for two souls to merge in one body. A Life Everlasting Sarah Gray, 2016-09-27 A donor mother's powerful memoir of grief and rebirth that is also a fascinating medical science whodunit taking us inside the world of organ, eye, tissue, and blood donation and cutting-edge scientific research. When Sarah Gray received the devastating news that her unborn son Thomas was diagnosed with anencephaly, a terminal condition, she decided she wanted his death and life to have meaning. In the weeks before she gave birth to her twin sons in 2010, she arranged to donate Thomas's organs. Due to his low birth weight, they would go to research rather than transplant. As transplant donors have the opportunity to meet recipients, Sarah wanted to know how Thomas's donation would be used. That curiosity fueled a scientific odyssey that leads Sarah to some of the most prestigious scientific facilities in the country, including Harvard, Duke, and the University of Pennsylvania. Pulling back the curtain of protocol and confidentiality, she introduces the researchers who received Thomas's donations: held his liver in their hands, studied his cells under the microscope. Sarah's journey to find solace and understanding takes her beyond her son's donations, offering a breathtaking overview of the world of medical research and the valiant scientists on the horizon of discovery. She goes behind the scenes at organ procurement organizations, introducing skilled technicians for whom death means saving lives, empathetic counselors, and the brilliant minds who are finding surprising and inventive ways to treat and cure disease through these donations. She also shares the moving stories of other donor families.

A Life Everlasting is an unforgettable testament to hope, a tribute to life and discovery, and a portrait of unsung heroes pushing the boundaries of medical science for the benefit of all humanity.

Strange Harvest Lesley A. Sharp, 2006-10-04 Strange Harvest illuminates the wondrous yet disquieting medical realm of organ transplantation by drawing on the voices of those most deeply involved transplant recipients clinical specialists and the surviving kin of deceased organ donors In this rich and deeply engaging ethnographic study anthropologist Lesley Sharp explores how these parties think about death loss and mourning especially in light of medical taboos surrounding donor anonymity As Sharp argues new forms of embodied intimacy arise in response and the riveting insights gleaned from her interviews observations and descriptions of donor memorials and other transplant events expose how patients and donor families make sense of the transfer of body parts from

the dead to the living For instance all must grapple with complex yet contradictory clinical assertions of death as easily detectable and absolute nevertheless transplants are regularly celebrated as forms of rebirth and donors as living on in others bodies New forms of sociality arise too recipients and donors relatives may defy sanctions against communication and through personal encounters strangers are transformed into kin Sharp also considers current experimental research efforts to develop alternative sources for human parts with prototypes ranging from genetically altered animals to sophisticated mechanical devices These future trajectories generate intriguing responses among both scientists and transplant recipients as they consider how such alternatives might reshape established yet unusual forms of embodied intimacy

Raising the Dead Ronald Munson, 2002-01-17 Perhaps no medical breakthrough in the twentieth century is more spectacular more hope giving or more fraught with ethical questions than organ transplantation Each year some 25 000 Americans are pulled back from the brink of death by receiving vital new organs Another 5 000 die while waiting for them And what distinguishes these two groups has become the source of one of our thorniest ethical questions In Raising the Dead Ronald Munson offers a vivid often wrenchingly dramatic account of how transplants are performed how we decide who receives them and how we engage the entire range of tough issues that arise because of them Each chapter begins with a detailed account of a specific case Mickey Mantle s controversial liver transplant for example followed by careful analysis of its surrounding ethical questions the charges that Mantle received special treatment because he was a celebrity the larger problems involving how organs are allocated and whether alcoholics should have an equal claim on donor livers In approaching transplant ethics through specific cases Munson reminds us of the complex personal and emotional dimension that underlies such issues The book also ranges beyond our present capabilities to explore the future possibilities in xenotransplantation transplanting animal organs into humans and stem cell technology that would allow doctors to grow new organs from the patient s own cells Based on extensive scientific research but written with a novelist s eye for the human condition Raising the Dead shows readers the reality of organ transplantation now the possibility of what it may become and how we might respond to the ethical challenges it forces us to confront

Buy **The Hero Within** to overcome the darkest of days today. **All My Tomorrows** Eric Gregory, 2017-08-31. No experience is worse than being a parent who has suffered the death of a child. It's so horrible that the English language doesn't have a word for it. Chris Gregory, a nineteen-year-old Freshman at Loyola University New Orleans, had a girlfriend. He was rushing a fraternity, and although he had had a rough first semester, he told his parents he was certain he was finally getting this college thing right. One night during a casual after-dinner conversation about driver's licenses, Chris's parents learned that he had opted to become an organ donor. What am I going to do with my organs after I'm dead? And besides, he added with a grin, who wouldn't want this body? Life's funny. One day, some kid is a happy-go-lucky college freshman, healthy as a horse, and another guy is standing at death's door. And then, in a matter of hours, they somehow trade places. Chris collapsed and died of an aneurysm with no warning. Five people who had been near death lived to see another day because they received Chris's organs. Eric Gregory, his father, wrote this book to chronicle this miracle of science and how meeting these recipients of his son's organs filled a special need in their hearts that few outside the organ donation community can understand. **Organ Transplants** Henry Wouk, 2013-08-01. Every ten minutes, a new name is added to the ever-growing national organ transplant waiting list. Readers will explore the history of organ transplants and its current state. Readers will learn about how organ donor and registry works, as well as what it's like to be a patient waiting for this life-saving medicine. **Borrowing Life** Shelley Fraser Mickle, 2020-04-14. Against a global backdrop of wartime suffering and postwar hope, **Borrowing Life** gathers the personal histories of the men and women behind the team that enabled and performed the modern medical miracle of the world's first successful organ transplant. An extraordinary work, Shelley Fraser Mickle has not only provided a detailed, fascinating documentation of the world's first successful organ transplant, but she has also painted the lives of those involved—doctors, patients, family members—so vividly that the reader is completely enthralled and emotionally invested in their grieved losses as well as their successes. The result is a beautiful tribute to medical science as well as to humanity. Jill McCorkle, NYT bestselling author of *Life After Life*, Working with Dr. Moore, Dr. Murray, and Dr. Vandam to create the painting commemorating their historic operation and the research leading up to it, was the greatest adventure of my artistic career. Having my painting on the cover of **Borrowing Life** renews that excitement for I know what grand adventure is waiting for the reader. Joel Babb, artist. I was so very pleased to be involved with Shelley as she wrote her captivating, compelling book. I only wish that Ron could be here with me to read it. Cynthia Herrick, wife of the first successful organ transplant donor. Had these men and women not worked diligently to save the life of Charles Woods, I and my 5 brothers and 3 sisters would not have been born. Charles Woods and Miriam Woods are my parents. It is thrilling to read Ms

Mickle's book as it closely mirrors the stories our dad and mom shared with us as children. The amazing thing is that as a disfigured war hero, our dad embraced his appearance as a badge of honor. David Woods performed at Boston's Peter Bent Brigham Hospital in 1954; the first successful kidney transplant was the culmination of years of grit, compassion, and the pursuit of excellence by a remarkable medical team: Nobel Prize-winning surgeon Joseph Murray, his boss and fellow surgeon Francis Moore, and British scientist and fellow Nobel laureate Peter Medawar. Drawing on the lives of these members of the Greatest Generation, *Borrowing Life* creates a compelling narrative that begins in wartime and tracks decades of the ups and downs, personal and professional, of these inspiring men and their achievements, which continue to benefit humankind in so many ways.
