Edition Jane E. Miller, 2013-09-26 Many different people from social scientists to government agencies to business professionals depend on the results of multivariate models to inform their decisions. Researchers use these advanced statistical techniques to analyze relationships among multiple variables such as how exercise and weight relate to the risk of heart disease or how unemployment and interest rates affect economic growth. Yet despite the widespread need to plainly and effectively explain the results of multivariate analyses to varied audiences, few are properly taught this critical skill. *The Chicago Guide to Writing about Multivariate Analysis* is the book researchers turn to when looking for guidance on how to clearly present statistical results and break through the jargon that often clouds writing about applications of statistical analysis. This new edition features even more topics and real world examples making it the must have resource for anyone who needs to communicate complex research results. For this second edition Jane E. Miller includes four new chapters that cover writing about interactions, writing about event history analysis, writing about multilevel models and the Goldilocks principle for choosing the right size contrast for interpreting results for different variables. In addition she has updated or added numerous examples while retaining her clear voice and focus on writers thinking critically about their intended audience and objective. Online podcasts, templates and an updated study guide will help readers apply skills from the book to their own projects and courses. This continues to be the only book that brings together all of the steps involved in communicating findings based on multivariate analysis: finding data, creating variables, estimating statistical models, calculating overall effects, organizing ideas, designing tables and charts, and writing prose in a single volume. When aligned with Miller's twelve fundamental principles for quantitative writing, this approach will empower readers, whether students or experienced researchers, to communicate their findings clearly and effectively.

Handbook of Marketing Decision Models
Berend Wierenga, Ralf van der Lans, 2017-07-12 The Second Edition of this book presents the state of the art in this important field. Marketing decision models constitute a core component of the marketing discipline and the area is changing rapidly, not only due to fundamental advances in methodology and model building but also because of the recent developments in information technology, the Internet and social media. This Handbook contains eighteen chapters that cover the most recent developments of marketing decision models in different domains of marketing. Compared to the previous edition, thirteen chapters are entirely new while the remaining chapters represent complete updates and extensions of the previous edition. This new edition of the Handbook has chapters on models for substantive marketing problems such as customer relationship management, customer loyalty management, website design, Internet advertising, social media and social networks. In addition, it contains chapters on recent methodological developments that are gaining popularity in the area of marketing decision models such as structural modeling, learning dynamics, choice modeling, eye tracking and measurement. The introductory chapter discusses the main developments of the last decade and discusses perspectives for future developments.
