Halophiles Biodiversity And Sustainable Exploitation Sustainable Development And Biodiversity:

Halophiles Dinesh K Maheshwari, Meenu Saraf, 2015-09-16 The world of halophiles is quite diverse and their representatives in three domains of life i.e. archaea, bacteria and eukarya. They are found all over the small subunit rRNA based tree of life and these microorganisms are adapted to salt concentration up to saturation hence able to grow at 300g l NaCl concentration. Their metabolic diversity is high as well encompassing oxygenic and anoxygenic phototrophs, aerobic heterotrophs, denitrifiers, sulphate reducers, fermenters and methanogens. The proteins of halophiles are magnificently engineered to function in a milieu containing 2.5M salt that encodes genes represent a valuable repository and resource for reconstruction and visualizing processes of habitat selection and adaptive evolution. Search for new enzymes endowed with novel activities and enhanced stability continues to be desirable purpose for important commercial production of biotechnological significance. These poly extremophiles proved excellent source of enzymes and metabolites possessing inherent ability to function in extreme conditions of high salt, alkaline pH and facilitating catalysis for industrial application in food processing, industrial bioconversion, bioremediation etc. In fact it has just begun to realize the great potential and true extent of diversity and suitable applications if explored them judiciously. This book highlights current applications and research on halophiles to provide a timely overview. Chapters are written by expert authors from around the world and include topics of varied importance which include their role to play in enzyme production, restoration of soil fertility and plant growth, antimicrobial and biocatalytic potential, biomolecules in nanotechnology and aspects of quorum sensing. The book is divided into three sections dealing with biodiversity, biotechnology and sustainable exploitation of halophiles. This major new work represents a valuable source of information to all those scientists interested in microorganisms in general and extremophiles in particular with respect to their innovative products and applications. *Plant Stress Mitigators* Mansour Ghorbanpour, Muhammad Adnan Shahid, 2022-12-06 *Plant Stress Mitigators: Types, Techniques and Functions* presents a detailed contextual discussion of various stressors on plant health and yield with accompanying insights into options for limiting impacts using chemical elicitors, bio-stimulants, breeding techniques and agronomical techniques such as seed priming, cold plasma treatment and nanotechnology amongst others. The book explores the various action mechanisms for enhancing plant growth and stress tolerance capacity including nutrient solubilizing and mobilizing, biocontrol activity against plant pathogens, phytohormone production, soil conditioners and many more unrevealed mechanisms. This book combines research methods, opinion, perspectives and reviews dissecting the stress alleviation action of different plant stress mitigators on crops grown under optimal and sub-optimal growing conditions, abiotic and biotic stresses. Explores the various action mechanisms of mitigators. Highlights the relationship between mitigator and nutrient efficiency, product quality and microbial population. Includes both biotic and abiotic stressors and their mitigation options. **Extremophiles** Ravi V. Durvasula, D. V. Subba Rao, 2018-01-09 Highly recommended by CHOICE Oct 2018 Extremophiles are nature's ultimate

Environment and Sustainable Development M.H. Fulekar, Bhawana Pathak, R K Kale, 2013-10-04 Global society in the 21st century is facing challenges of improving the quality of air water soil and the environment and maintaining the ecological balance Environmental pollution thus has become a major global concern The modern growth of industrialization urbanization modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs which has contributed in disturbing the ecological balance on which the quality of our environment depends Human beings in the truest sense are the product of their environment The man environment relationship indicates that pollution and deterioration of the environment have a social origin The modern technological advancements in chemical processes operations have generated new products resulting in new pollutants in such abundant levels that they are above the self cleaning capacity of the environment One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment Sustainable development envisages the use of natural resources such as forests land water and fisheries in a sustainable manner without causing changes in our natural world The Rio de Janeiro Earth Summit held in Brazil in 1992 focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment This book will be beneficial as a source of educational material to post graduate research scholars teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development
