Chemistry Alessandra Tolomelli,Lucia Ferrazzano,Walter Cabri,2024-10-18 Oligopeptides and oligonucleotides jointly defined as TIDES have been neglected in the past as potential drugs due to their short half life and practical difficulties in the manufacturing processes The consolidation of iterative synthetic techniques allowing for design of new chemical entities with better pharmaceutical profiles has led to renewed interest in these compounds Large scale manufacturing is therefore now required and it is important that sustainability and green chemistry are considered from the outset As the two classes display many similarities advances in sustainable approaches can easily be adapted from one class to the other This book brings together all of the information on green synthesis of oligopeptides which is well established and all of the preliminary data on green oligonucleotides synthesis creating a resource that will help chemists to bridge the gap between these two areas
