Handbook Of Process Algebra Handbook Of Process Algebra:

Handbook of Process Algebra J.A. Bergstra, A. Ponse, S.A. Smolka, 2001-03-16 Process Algebra is a formal description technique for complex computer systems especially those involving communicating concurrently executing components It is a subject that concurrently touches many topic areas of computer science and discrete math including system design notations logic concurrency theory specification and verification operational semantics algorithms complexity theory and of course algebra This Handbook documents the fate of process algebra since its inception in the late 1970 s to the present It is intended to serve as a reference source for researchers students and system designers and engineers interested in either the theory of process algebra or in learning what process algebra brings to the table as a formal system description and verification technique The Handbook is divided into six parts spanning a total of 19 self contained Chapters The organization is as follows Part 1 consisting of four chapters covers a broad swath of the basic theory of process algebra Part 2 contains two chapters devoted to the sub specialization of process algebra known as finite state processes while the three chapters of Part 3 look at infinite state processes value passing processes and mobile processes in particular Part 4 also three chapters in length explores several extensions to process algebra including real time probability and priority The four chapters of Part 5 examine non interleaving process algebras while Part 6 s three chapters address process algebra tools and applications

Introduction to Process Algebra Wan Fokkink, 2013-03-09 Automated and semi automated manipulation of so called labelled transition systems has become an important means in discovering flaws in software and hardware systems Process algebra has been developed to express such labelled transition systems algebraically which enhances the ways of manipulation by means of equational logic and term rewriting The theory of process algebra has developed rapidly over the last twenty years and verification tools have been developed on the basis of process algebra often in cooperation with techniques related to model checking This textbook gives a thorough introduction into the basics of process algebra and its applications

Process Algebra: Equational Theories of Communicating Processes J. C. M. Baeten, M. A. Reniers, 2010 Presents a unified overview of the various process algebras currently in use and sets the standard for the field

Process Algebra with Timing J.C.M. Baeten, C.A. Middelburg, 2013-03-09 This book is concerned with a number of theories that can be used for describing and analyzing systems of interacting components in case it is desirable or necessary to regard their time dependent behavior Society is becoming increasingly more dependent on complex computer based systems that are composed of several components that act concurrently and interact to synchronize and communicate with each other The complexity of these systems arises to a great extent from the many ways in which their components can interact The need that these components act and interact on time as well adds considerably to the complexity In developing such a system it is important to be able to acquire a better understanding of the relevant issues at the conceptual level to describe the system in a precise way at various levels of detail and to analyze it on the basis of the descriptions When the early algebraic theories about processes such as ACP 16 17 20 CCS 49 50 and CSP 27 39 were developed for that purpose the established opinion was still that timing is a concern that can more often than not be treated independently It is therefore not surprising that timing is deliberately ignored in those theories They have now all been extended to deal with timing

Process Algebra for Parallel and Distributed Processing Michael Alexander, William Gardner, 2008-12-22 Collects the Latest Research Involving the Application of Process Algebra to Computing Exploring state of the art applications Process Algebra for Parallel and Distributed Processing shows how one formal method of reasoning process algebra has become a

powerful tool for solving design and implementation challenges of concurrent systems

Parallel Process Algebra and Probabilistic Methods: Performance Modeling and Verification Holger Hermanns, Roberto Segala, 2003-08-02 This volume contains the proceedings of the second joint PAPM PROBMIV Workshop held at the University of Copenhagen Denmark July 25-26 2002 as part of the Federated Logic Conference FLoC 2002 The PAPM PROBMIV workshop results from the combination of two workshops PAPM Process Algebras and Performance Modeling and PROBMIV Probabilistic Methods in Verification The aim of the joint workshop is to bring together the researchers working across the whole spectrum of techniques for the modeling specification analysis and verification of probabilistic systems Probability is widely used in the design and analysis of software and hardware systems as a means to derive efficient algorithms e.g. randomization as a model for unreliable or unpredictable behavior as in the study of fault tolerant systems and computer networks and as a tool to study performance and dependability properties The topics of the workshop include specification models and semantics of probabilistic systems analysis and verification techniques probabilistic methods for the verification of non probabilistic systems and tools and case studies The first PAPM workshop was held in Edinburgh in 1993 the following ones were held in Regensburg 1994 Edinburgh 1995 Turin 1996 Enschede 1997 Nice 1998 Zaragoza 1999 and Geneva 2000 The first PROBMIV workshop was held in Indianapolis Indiana 1998 the next one took place in Eindhoven 1999 In 2000 PROBMIV was replaced by a Dagstuhl seminar on Probabilistic Methods in Verification

Process Algebras for Petri Nets Roberto Gorrieri, 2017-04-13 This book deals with the problem of finding suitable languages that can represent specific classes of Petri nets the most studied and widely accepted model for distributed systems Hence the contribution of this book amounts to the alphabetization of some classes of distributed systems The book also suggests the need for a generalization of Turing computability theory It is important for graduate students and researchers engaged with the concurrent semantics of distributed communicating systems The author assumes some prior knowledge of formal languages and theoretical computer science

Process Algebra and Probabilistic Methods. Performance Modelling and Verification Luca de Alfaro, Stephen Gilmore, 2003-06-30 This book constitutes the refereed proceedings of the Joint Workshop on Process Algebra and Performance Modeling and Probabilistic Methods in Verification PAPM PROBMIV 2001 held in Aachen Germany in September 2001 The 12 revised full papers presented together with one invited paper were carefully reviewed and selected from 23 submissions Among the topics addressed are model representation model checking probabilistic systems analysis refinement Markov chains random variables stochastic timed systems Max Plus algebra process algebra system modeling and the Mobius modeling framework

A Process Algebraic Approach to Software Architecture Design Alessandro Aldini, Marco Bernardo, Flavio Corradini, 2010-03-14 In the field of formal methods in computer science concurrency theory is receiving a constantly increasing interest This is especially true for process algebra Although it had been originally conceived as a means for reasoning about the semantics of concurrent programs process algebraic formalisms like

CCS CSP ACP calculus and their extensions see e.g. [154, 119, 112, 22, 155, 181, 30] were soon used also for comprehending functional and nonfunctional aspects of the behavior of communicating concurrent systems. The scientific impact of process calculi and behavioral equivalences at the base of process algebra is witnessed not only by a very rich literature. It is in fact worth mentioning the standardization procedure that led to the development of the process algebraic language LOTOS [49] as well as the implementation of several modeling and analysis tools based on process algebra like CWB [70] and CADP [93] some of which have been used in industrial case studies. Furthermore process calculi and behavioral equivalences are by now adopted in university level courses to teach the foundations of concurrent programming as well as the model driven design of concurrent distributed and mobile systems. Nevertheless after 30 years since its introduction process algebra is rarely adopted in the practice of software development. On the one hand its technicalities often obfuscate the way in which systems are modeled. As an example if a process term comprises numerous occurrences of the parallel composition operator it is hard to understand the communicationscheme among the various subterms. On the other hand process algebra is perceived as being difficult to learn and use by practitioners as it is not close enough to the way they think of software systems.

A Journey from Process Algebra via Timed Automata to Model Learning Nils Jansen, Mariëlle Stoelinga, Petra van den Bos, 2022-09-06. This Festschrift dedicated to Frits W. Vaandrager on the occasion of his 60th birthday contains papers written by many of his closest collaborators. A Guide to the Literature on Semirings and their Applications in Mathematics and Information Sciences K. Glazek, 2013-06-29. This volume presents a short guide to the

extensive literature concerning semirings along with a complete bibliography The literature has been created over many years in variety of languages by authors representing different schools of mathematics and working in various related fields In many instances the terminology used is not universal which further compounds the difficulty of locating pertinent sources even in this age of the Internet and electronic dissemination of research results So far there has been no single reference that could guide the interested scholar or student to the relevant publications This book is an attempt to fill this gap My interest in the theory of semirings began in the early sixties when together with Bogdan W glorz I tried to investigate some algebraic aspects of compactifications of topological spaces semirings of semicontinuous functions and the general ideal theory for special semirings Unfortunately local algebraists in Poland told me at that time that there was nothing interesting in investigating semiring theory because ring theory was still being developed However some time later we became aware of some similar investigations having already been done The theory of semirings has remained my first love ever since and I have been interested in the results in this field that have been appearing in literature even though I have not been active in this area myself

Integrated Formal Methods Michael Butler, Luigia Petre, Kaisa Sere, 2003-08-01 The third in a series of international conferences on Integrated Formal Methods IFM 2002 was held in Turku Finland May 15 17 2002 Turku situated in the south western corner of the country is the former capital of Finland The conference was organized jointly by Abo Akademi University and Turku Centre for Computer Science The theme of IFM 1999 was the integration of state and behavioral based formalisms For IFM 2000 this was widened to include all aspects pertaining to the integration of formal methods and formal notations One of the goals of IFM 2002 was to further investigate these themes Moreover IFM 2002 explored the relations between formal methods and graphical notations especially the industrial standard language for software design the Unified Modeling Language UML The themes of IFM 2002 reflect what we believe is a growing trend in the Formal Methods and Software Engineering research communities Over the last three decades computer scientists have developed a range of formalisms focusing on particular aspects of behavior or analysis such as sequential program structures concurrent program structures data and information structures temporal reasoning deductive proof and model checking Much effort is now being voted to integrating these methods in order to combine their advantages and ensure they scale up to industrial needs Graphical notations are now widely used in software engineering and there is growing recognition of the importance of providing these with the formal underpinnings and formal analysis capabilities found in formal methods

Foundations of Software Science and Computational Structures Helmut Seidl, 2007-07-02 This book constitutes the refereed proceedings of the 10th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2007 held in Braga Portugal in March April 2007 The 25 revised full papers presented together with the abstract of one invited talk cover a broad spectrum on theories and methods to support analysis synthesis transformation and verification of programs and

software systems Introduction to Bisimulation and Coinduction Davide Sangiorgi, 2011-10-13 Induction is a pervasive tool in computer science and mathematics for defining objects and reasoning on them Coinduction is the dual of induction and as such it brings in quite different tools Today it is widely used in computer science but also in other fields including artificial intelligence cognitive science mathematics modal logics philosophy and physics The best known instance of coinduction is bisimulation mainly employed to define and prove equalities among potentially infinite objects processes streams non well founded sets etc This book presents bisimulation and coinduction the fundamental concepts and techniques and the duality with induction Each chapter contains exercises and selected solutions enabling students to connect theory with practice A special emphasis is placed on bisimulation as a behavioural equivalence for processes Thus the book serves as an introduction to models for expressing processes such as process calculi and to the associated techniques of operational and algebraic analysis **CONCUR 2002 - Concurrency Theory** Lubos Brim, Petr Jancar, Mojmir Kretinsky, Antonin Kucera, 2003-08-02 This book constitutes the refereed proceedings of the 13th International Conference on Concurrency Theory CONCUR 2002 held in Brno Czech Republic in August 2002 The 32 revised full papers presented together with abstracts of seven invited contributions were carefully reviewed and selected from 101 submissions The papers are organized in topical sections on verification and model checking logic mobility probabilistic systems models of computation and process algebra security Petri nets and bisimulation *Handbook of Dynamic System Modeling* Paul A. Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to uniformly study the subject Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions Collecting all of these expressions of dynamic models the Handbook of Dynamic Sy Current Trends In Theoretical Computer Science: The Challenge Of The New Century; Vol 1: Algorithms And Complexity; Vol 2: Formal Models And Semantics Grzegorz Rozenberg, Arto Salomaa, Gheorghe Paun, 2004-04-19 This book is based on columns and tutorials published in the Bulletin of the European Association for Theoretical Computer Science EATCS during the period 2000 2003 It presents many of the most active current research lines in theoretical computer science The material appears in two volumes Algorithms and Complexity and Formal Models and Semantics reflecting the traditional division of the field The list of contributors includes many of the well known researchers in theoretical computer science Most of the articles are reader friendly and do not presuppose much knowledge of the area in question Therefore the book constitutes very suitable supplementary reading material for various courses and seminars in computer science *Agent Communication* Rogier M. van Eijk, Marc-Philippe Huget, Frank Dignum, 2005-02-23 In this book we present a collection of papers around the topic of agent communication The communication between agents has been one of the major topics of research in multiagent systems The current work can therefore build on a number of previous Workshops of which the proceedings have been published in earlier volumes in this series The basis of this collection is formed by the accepted submissions of the Workshop on Agent

Communication held in conjunction with the AAMAS Conference in July 2004 in New York The workshop received 26 submissions of which 14 were selected for publication in this volume Besides the high quality workshop papers we noticed that many papers on agent communication found their way to the main conference We decided therefore to invite a number of authors to revise and extend their papers from this conference and to combine them with the workshop papers We believe that the current collection comprises a very good and quite complete overview of the state of the art in this area of research and gives a good indication of the topics that are of major interest at the moment The papers can roughly be divided over the following five themes social commitments multiparty communication content languages dialogues and conversations speech acts Although these themes are of course not mutually exclusive they indicate some main directions of research We therefore have arranged the papers in the book according to the topics indicated above
