Handbook Of Derivatives For Chromatography 2e:

A Handbook of Derivatives for Mass Spectrometry Vladimir Zaikin, John M. Halket, 2009 Chemical derivatisation of functional groups has proved popular since the beginning of organic mass spectrometry as a means to enhance the stability and volatility of the analytes as well as facilitating structure elucidation This book provides comprehensive information on the wide range of derivatisation methods Each chapter looks at a particular area of derivatisation and includes extensive references to the literature for further research where necessary There are nearly 1800 references which as well as full bibliographic information include chapter paper titles where appropriate and Digital Object Identifiers DOIs to allow easy retrieval of the online version of the referenced publication The emergence of atmospheric pressure ionisation and other soft ionisation techniques has not diminished the interest in such chemical techniques as witnessed by the many chemical tags used in quantitative proteomics Chapter 9 The last two chapters a substantial part of the book deal with derivatisation for use with soft ionisation of both small and large molecules Chapters Silylation Acylation Alkylation Arylation Cyclic derivatives Monofunctional compounds Polyfunctional compounds On line derivatisation degradation Soft ionisation small molecules Soft ionisation large molecules

Analytical Determination of Nicotine and Related Compounds and their Metabolites J.W. Gorrod, P. Jacob III, 1999-11-02 This book provides for the first time a single comprehensive source of information on the analytical chemistry of nicotine and related alkaloids The editors have brought together scientists from academia and the tobacco industry to describe the state of the art of the chemistry and analytical methods for measurement of nicotine Both the scope and detail of the book are impressive Chapters describe the history pharmacology and toxicology of nicotine the biosynthesis of nicotine and other alkaloids in the tobacco plant the general chemistry of nicotine and the analytical methodologies that have been used to measure nicotine and related alkaloids in biological specimens in tobacco and pharmaceutical products and in

tobacco smoke There is also a comprehensive review of the chemistry and toxicology of nicotine derived nitrosamines an important class of tobacco carcinogens *Handbook of Chromatography Vol I (1982)* Shirley C. Churms, 2017-11-22 This handbook is intended to serve as a working manual and reference book for carbohydrate chemists and biochemists using the chromatographic methods that are indispensable in this field Emphasis is on newer methods such as high performance liquid chromatography HPLC and other automated liquid chromatography systems and the material included was compiled mainly from literature published during the years 1970 to 1978 Data appearing in Volumes I and II of the Handbook of Chromatography are not repeated here but references to relevant tables in Volumes I and II are given at the start of corresponding sections of this handbook In some cases material published before 1970 that was omitted from Volumes I and II of the series is included here this applies particularly to the sections dealing with paper chromatography and electrophoresis *Mass Spectrometry for Chemists and Biochemists* Robert A. W. Johnstone, Malcolm E. Rose, 1996-10-17 This book describes the full range of mass spectrometry techniques and applications This versatile technique is in ubiquitous use in universities and industry laboratories because of its ability to identify and quantify materials quickly and if necessary in minute amounts and solve analytical problems in a huge variety of fields The authors adopt an instructional approach and make use of recent examples to illustrate important points This second edition includes new methods and applications that have developed in the last ten years Powerful methods combining mass spectrometry with newer separation techniques the increased use of computers and analysis of once difficult polar and large mass compounds such as proteins using new ionisation methods are all discussed Requiring no previous knowledge of mass spectrometry this is an ideal teaching text at both undergraduate and postgraduate level and will also be of considerable interest to research workers
