selection of references *Materials Science with Ion Beams* Harry Bernas, 2009-10-03 Materials science is the prime example of an interdisciplinary science. It compasses the elds of physics, chemistry, material science, electrical engineering, chemical engineering, and other disciplines. Success has been outstanding. World class accomplishments in materials have been recognized by Nobel prizes in Physics and Chemistry and given rise to entirely new technologies. Materials science advances have underpinned the technology revolution that has driven societal changes for the last fifty years. Obviously, the end is not in sight. Future technology based problems in the current scene: High on the list are control and conservation of energy and environment, water purity and availability, and propagating the information revolution. All fall in the technology domain. In every case, proposed solutions begin with new forms of materials, materials processing, or new artificial material structures. Scientists seek new forms of photovoltaics with greater efficiency and lower cost. Water purity may be solved through surface control, which promises new desalination processes at lower energy and lower cost. Revolutionary concepts to extend the information revolution reside in controlling the spin of electrons or enabling quantum states, as in quantum computing. Ion beam experts make substantial contributions to all of these burgeoning sciences. **Handbook of Surface and Interface Analysis** John
