Spectroscopic Methods in Food Analysis Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e.g chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers As such this book explains why spectroscopic methods have been extensively employed to the analysis of food

products as they often require minimal or no sample preparation provide rapid and on line analysis and have the potential to run multiple tests on a single sample i.e. non destructive This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer the consumer the surveillance and the legislative bodies that ultimately provide healthy and safe products

Analysis of Pesticide Residues in Food Horacio Heinzen,Leo M.L. Nollet,Amadeo R. Fernandez-Alba,2017-10-10 In the last decades the public concern on the pesticide residues content in foods have been steadily rising The global development of food trade implies that aliments from everywhere in the world can reach the consumer s table Therefore the identification of agricultural practices that employ different pesticides combinations and application rates to protect produce must be

characterized as they left residues that could be noxious to human health. However, the possible number of pesticides and its metabolites of toxicological relevance to be found in a specific commodity is almost 1500 and the time needed to analyze them one by one makes this analytical strategy a unrealistic task. To overcome this problem, the concept of Multi Residue Methods (MRM) for the analysis of pesticide traces have been developed. The advent of new and highly sensitive instrumentation based in hyphenated chromatographic systems to coupled mass analyzers (GC-MS, LC-MS or MSn) permitted simultaneously the identification and the determination of up to hundreds of pesticide residues in a single chromatographic run. Multiresidue Methods for the Analysis of Pesticide Residues in Food presents the analytical procedures developed in the literature as well as those currently employed in the most advanced laboratories that perform routinely Pesticide Residue Analysis in foods. In addition to these points, the regulations, guidelines and recommendations from the most important regulatory agencies of the world on the topic will be commented and contrasted.
