Histoire Sciences Savoirs Renaissance Lumi Res:

The Origins of the Idea of Scientific Progress Daniel Špelda, 2024-06-21 This volume offers a new interpretation of the genesis of the idea of scientific progress in early modern science and philosophy The interpretation argues that the idea of scientific progress was not a historical category but an epistemological one The main thesis of the book posits that the idea of scientific progress was a methodological means of dealing with the contingency of nature To illustrate the novelty of the idea the individual chapters compare several features of Renaissance natural philosophy with a new regime of knowledge that included time as an inevitable factor of empirical research The temporal regime of knowledge is illustrated by the work of Bernard de Fontenelle and his colleagues at the Acad mie des sciences in Paris at the end of the 17th century The new interpretation remedies a gap in recent scholarship where the idea of scientific progress has been overlooked even though the early modern natural philosophers themselves used it to describe the nature of their research The book places both well known texts and less studied documents in a new light thus contributing to the lively and rich debate on the origins and nature of early modern science and philosophy It is of interest to scholars studying the history of early modern philosophy and science *Les Réseaux de sociabilité dans la culture des Lumières. Knowledge and the Early Modern City Bert De Munck, Antonella Romano, 2019-08-20 Knowledge and the Early Modern City uses case studies from the sixteenth to the eighteenth centuries to examine the relationships between knowledge and the city and how these changed in a period when the nature and

conception of both was drastically transformed Both knowledge formation and the European city were increasingly caught up in broader institutional structures and regional and global networks of trade and exchange during the early modern period Moreover new ideas about the relationship between nature and the transcendent as well as technological transformations impacted upon both considerably This book addresses the entanglement between knowledge production and the early modern urban environment while incorporating approaches to the city and knowledge in which both are seen as emerging from hybrid networks in which human and non human elements continually interact and acquire meaning It highlights how new forms of knowledge and new conceptions of the urban co emerged in highly contingent practices shedding a new light on present day ideas about the impact of cities on knowledge production and innovation Providing the ideal starting point for those seeking to understand the role of urban institutions actors and spaces in the production of knowledge and the development of the so called modern knowledge society this is the perfect resource for students and scholars of early modern history and knowledge
