**Morphology at the Interfaces** Jason D. Haugen, 2008 This monograph addresses morphology and its interfaces with phonology and syntax by examining comparative data from the Uto Aztecan language family and analyses involving reduplication as well as noun incorporation and related derivational morphology are provided within the framework of Distributed Morphology. Reduplication is treated by analyzing reduplicative morphemes, reduplicants as morphological pieces. Vocabulary Items inserted into syntactic slots at Morphological Structure. Noun incorporation constructions are analyzed as involving either incorporation head movement in syntax à la Baker 1988 or conflation involving direct merger of a nominal root into verbal position à la Hale and Keyser 2002. It is argued that denominal verb constructions should be treated as a sub case of NI as in Hale and Keyser 1993. Finally the historical development of the polysynthesis parameter in Nahuatl is discussed and a reconstruction of the likely stages of development each of which is attested elsewhere in the family is presented.
