LaLiberte,Richard M. Stallman,2000   *GNU Emacs Manual* Richard Stallman,1993   **Lisp in Small Pieces** Christian
Queinnec,2003-12-04 This is a comprehensive account of the semantics and the implementation of the whole Lisp family of
languages namely Lisp Scheme and related dialects It describes 11 interpreters and 2 compilers including very recent
techniques of interpretation and compilation The book is in two parts The first starts from a simple evaluation function and
enriches it with multiple name spaces continuations and side effects with commented variants while at the same time the
language used to define these features is reduced to a simple lambda calculus Denotational semantics is then naturally
introduced The second part focuses more on implementation techniques and discusses precompilation for fast interpretation
threaded code or bytecode compilation towards C Some extensions are also described such as dynamic evaluation reflection
macros and objects This will become the new standard reference for people wanting to know more about the Lisp family of
languages how they work how they are implemented what their variants are and why such variants exist The full code is
supplied and also available over the Net A large bibliography is given as well as a considerable number of exercises Thus it
may also be used by students to accompany second courses on Lisp or Scheme   Writing GNU Emacs Extensions Bob
Glickstein,1997 This book introduces Emacs Lisp and tells you how to make the editor do whatever you want whether it s
altering the way text scrolls or inventing a whole new major mode Topics progress from simple to complex from lists symbols
and keyboard commands to syntax tables macro templates and error recovery Resource description page   *The Art of UNIX
Programming* Eric S. Raymond,2003-09-23 The Art of UNIX Programming poses the belief that understanding the unwritten
