Student-Centered Research James Pelech, 2021-06-01 Teachers increasingly are being charged to conduct research on teaching and learning in their classes Action research is an instrument that teachers can use for their particular classroom to meet this charge While traditional research provides effective guidelines for teaching and learning its generalized format does not take into consideration the multitude of variables that affect individual classrooms and students Action research enables the teacher to improve the learning of the students in their particular context this in turn improves the professional

practice of the teacher The uniqueness of the model presented in this book is that this model is guided by specific constructivist principles These principles are then transformed into learning strategies and applied to the action research cycle Each stage of the action research process also is steered by prompts emanating from the constructivist philosophy The prompts provide questions that the teacher can use to examine current practices and consider new approaches The blending of constructivism and action research enables the teacher to create a new cognitive framework for understanding and enhancing student learning This book provides a guide for combining two important traditions resulting in a research platform which creates new knowledge about both students and teachers

Leading Educational Change Wisely Christopher M. Branson, 2010-01-01 Despite over 40 years of research and writing about how to lead educational change we still can t get it right Although we keep fine tuning our present ways we are yet to come up with an approach that enables educational change to happen successfully and sustainably Although this book acknowledges the importance of learning from our past it also highlights a key deficiency that has consistently compromised these efforts To date our approach to leading educational change has mainly focussed on trying to come up with the perfect practical strategy or plan In contrast this book argues that leading educational change successfully is not about following a clearly defined process like following a recipe but it is an improvisational art more like driving down a busy main street during peak hour traffic The successful leadership of educational change is an improvisational art because although the leader needs to have an overarching strategy a guiding plan what they actually do from moment to moment cannot be scripted The leader has to move back and forth from their plan to the reality currently being experienced so that the plan is being achieved but any adverse effects on those involved are being empathically and immediately attended to as well This approach to the leadership of educational change emphasises the need of the leader to be able to cope with the unforeseen the unexpected and the idiosyncratic Moreover this approach to the leadership of educational change emphasises

the relational as well as the rational requirements While such views might be familiar to many what is new and unique about this book is that it describes how it all can be achieved It provides clear research supported guidance for those who wish to finally lead successful and sustainable educational change *International Handbook of Self-Study of Teaching and Teacher Education Practices* J.
