Implementing Problem-Based Medical Education Arthur Kaufman, MD, 1985-09-15

A Springer Series on Medical Education book This is a book about the origins design implementation and effects of the Primary Care Curriculum at the University of New Mexico School of Medicine It is also so much more It is a first person account of a moving human experience in which some deeply caring people search for ways to provide a humane effective learning experience for students who are seen as preparing to be practitioners of a humane changing profession In the 1920s Gertrude Stein observed that the United States was now the oldest country in the world for it was the first to join the twentieth century Perhaps we must now view the University of New Mexico s PCC as among the

oldest programs in medical education for it may prove to have been one of the first to join the twenty first century Hilliard Jason MD EdD Director National Center for Faculty Development in the Health Professions University of Miami School of Medicine

GATE : Mechanical Engineering Guide Book - 10 Mock Tests and 6 Previous Year Papers (Solved MCQs and Numerical Based Questions) with Free Access to Online Tests EduGorilla Prep Experts, **Problems in Problem-Based Design Engineering Education** Juan Felipe Ruiz Muñoz, 2024-04-23

Modern industry faces complex and wicked problems that require engineering professionals to go beyond traditional natural science based linear problem solving approaches and adopt collaborative multidisciplinary and iterative problem solving strategies To tackle these kinds of problems organizations are increasingly turning to design problem solving methods based on the designer s way of thinking acting and doing Designers have a distinctive ability to deal with poorly defined ambiguous or wicked problems by emphasizing iterative exploration of both the problem and the solution spaces They do this through design reasoning patterns that involve constant iteration and temporary solutions This shift towards designerly ways of problem solving has in turn had an effect on engineering education where there has been a significant shift towards educational models that utilize design methodologies to engage students in immersive problem solving experiences One challenge for educators who utilize models based on designerly thinking is to create structures that actually support the learning objectives and the development of student skills that are rooted in design reasoning and acting and not merely in design tools Another challenge is to support collaboration across multiple areas that traditionally had clear boundaries This thesis studies practices utilized by educators in problem based designerly education to understand the underlying mechanisms and theoretical underpinnings of problem exploration in multidisciplinary education Additionally this thesis aims to explore and discuss the same processes and methods in the context of multidisciplinary education and design objects that can support collaboration across boundaries This thesis s key contributions are the exploration and discussion of aspects of problem exploration framing and reframing in a designerly problem based multidisciplinary educational environment as well as the challenges and difficulties that educators and students encounter in the process of exploring problems and collaborating and crossing disciplinary boundaries with participants from multiple disciplines To do so this thesis first explores the importance that the framing of the design brief has in the problem solving process Furthermore the design briefs are discussed as boundary objects that serve a crucial role in negotiation communication and coordination tools between stakeholders Second the importance of the reflective process that follows the idea generation and prototype building activities are discussed as an aspect of an educational model that allows participants to explore problems and avoid design fixation Moreover these objects are discussed based on their function as disciplinary boundary crossing objects and as an aid in negotiation and collaboration objects in problem exploration Thirdly methods and processes for assessment of student characteristics and skills are discussed where tensions and trade offs between self reporting and observer based methods are studied and explored These methods then serve as

boundary objects in the discussions between teaching teams in the student team formation process Furthermore team building and specifically the process of trust building and objects that aid in boundary crossing collaboration and communication to develop trust between students are also discussed Den moderna industrin står inför komplexa och skallade lmska eng wicked problem som kräver att ingenjörer gör längre traditionella naturvetenskapsbaserade linjära problemlsningsmetoder och antar samarbetande multidisciplinära och iterativa problemlsningsstrategier För att ta itu med den här typen av problem vänder sig organisationer i allt högre grad till designproblemlsningsmetoder baserade på designerns stånd att tänka agera och göra Designers har en utmärkt förmåga att hantera deligt definierade tvetydiga och lmska problem genom att betona iterativ utforskning av både problemet och lösningsutrymmena Därför detta genom designresonemangsmönster som involverar konstant iteration och tillfälliga lösningar Denna förändring mot designmässiga stånd att lösa problem har i sin tur haft en effekt på ingenjörsutbildningen där det har skett en betydande förändring mot utbildningsmodeller som använder designmetoder för att engagera studenter i verklighetsnära problemlsningsupplevelser En utmaning för pedagoger som använder modeller baserade på designtänkande är att skapa strukturer som faktiskt stöder lärarnas och utvecklingen av studenters förmågor som rör förankrade i designresonemang och agerande och inte bara i designverktyg En annan utmaning är att stödja samarbete över flera områden som traditionellt har haft tydliga gränser Denna avhandling studerar den praxis som används av lärare i problembaserad designutbildning för att först de underliggande mekanismerna och teoretiska grunderna för problemutforskning i multidisciplinär utbildning Dessutom syftar denna avhandling till att utforska och diskutera samma processer och metoder inom ramen för multidisciplinär utbildning och skapa designobjekt som kan stödja samarbete över gränser Den här avhandlingens nyckelbidrag är utforskandet och diskussionen av aspekter av problemutforskning inramning och omformulering i en designmässigt problembaserad multidisciplinär pedagogisk miljö såväl som de utmaningar och svårigheter som lärare och studenter möter i processen att utforska problem och samarbeta över disciplinära gränser korsas med deltagare från flera discipliner För att göra det undersöker denna avhandling först vilken betydelse utformningen av designbriefs har i problemlsningsprocessen Vidare diskuteras designbriefs som gränsobjekt som har en avgörande roll i förhållande till kommunikations och samordningsverktyg mellan intressenter För det andra diskuteras vikten av den reflekterande processen som följer på id genereringen och prototypbyggande aktiviteter som en aspekt av en utbildningsmodell som tillåter deltagarna att utforska problem och undvika designfixering Dessa objekt diskuteras också utifrån sin funktion som disciplinära gränsvärande objekt och som hjälpmedel vid förhandling och samverkansobjekt vid problemutforskning För det tredje diskuteras metoder och processer för bedömning av studenters egenskaper och förmågor där spänningar och avvikelser mellan självrapportering och observerade baserade metoder studeras och utforskas Dessa metoder fungerar sedan som gränsobjekt i diskussionerna mellan lärare i teamformeringsprocessen Vidare diskuteras teambuilding och specifikt processen att bygga upp tillit och objekt som hjälper till i gränsvärande samarbete och kommunikation för att utveckla tillit mellan

The Routledge Handbook of Translation and Education Sara Laviosa, Maria

González-Davies, 2019-12-06 The Routledge Handbook of Translation and Education will present the state of the art of the place and role of translation in educational contexts worldwide. It lays a sound foundation for the future interdisciplinary cooperation between Translation Studies and Educational Linguistics. By adopting a transdisciplinary perspective, the handbook will bring together the various fields of scholarly enquiry and practice that make a valuable contribution to enlarging the notion of translation and diversifying its uses in education. Each contribution provides an overview of the historical background to a given educational setting. Focusing on current research approaches and empirical findings, this volume outlines the development of pedagogical approaches, methods, assessment and curriculum design. The handbook also examines examples of pedagogies that integrate translation in the curriculum, the teaching methods approach, design and procedure, as well as assessment. Based on a multilingual and applied oriented approach, the handbook is essential reading for postgraduate students, researchers and advanced undergraduate students of Translation Studies and educationalists and educators in the 21st century post-global era. Chapters 4, 25 and 26 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.
