Handbook of Biophotonics, Volume 3 Jürgen Popp, Valery V. Tuchin, Arthur Chiou, Stefan H. Heinemann, 2012-05-14

This new handbook covers the world of biophotonics not only geographically with the editors coming from different continents but also in terms of content since the authors come from the whole spectrum of biophotonic basic and applied research. Designed to set the standard for the scientific community, these three volumes break new ground by providing readers with the physics basics as well as the biological and medical background together with detailed reports on recent technical advances. The Handbook also adopts an application related approach starting with the application and then citing the various tools to solve the scientific task, making it of particular value to medical doctors. Divided into several sections, the first part offers introductory chapters on the different fields of research, with subsequent parts focusing on the applications and techniques in various fields of industry and research. The result is a handy source for scientists seeking the basics in a condensed form and equally a reference for quickly gathering the knowledge from neighboring disciplines. Absolutely invaluable for biophotonic scientists in their daily work. *Biomedical Photonics Handbook, 3 Volume Set* Tuan

Process analysis is the starting point since plastics

processing is different from processing of metals ceramics and other materials. Plastics materials show unique behavior in terms of heat transfer, fluid flow, viscoelastic behavior, and a dependence of the previous time, temperature, and shear history, which determines how the material responds during processing and its end use. Many of the manufacturing processes are continuous or cyclical in nature. The systems are flow systems in which the process variables such as time, temperature, position, melt, and hydraulic pressure must be controlled to achieve a satisfactory product, which is typically specified by critical dimensions and physical properties which vary with the processing conditions. Instrumentation has to be selected so that it survives the harsh manufacturing environment of high pressures, temperatures, and shear rates, and yet it has to have a fast response to measure the process dynamics. At many times the measurements have to be in a non-contact mode so as not to disturb the melt or the finished product. Plastics resins are reactive systems. The resins will degrade if the process conditions are not controlled. Analysis of the process allows one to strategize how to minimize degradation and optimize end use properties.

Near-Infrared Spectroscopy Yukihiro Ozaki, Christian Huck, Satoru Tsuchikawa, Søren Balling Engelsen, 2020-11-13. This book provides knowledge of the basic theory, spectral analysis methods, chemometrics, instrumentation, and applications of near infrared (NIR) spectroscopy, not as a handbook but rather as a sourcebook of NIR spectroscopy. Thus, some emphasis is placed on the description of basic knowledge that is important in learning and using NIR spectroscopy. The book also deals with applications for a variety of research fields that are very useful for a wide range of readers from graduate students to scientists and engineers in both academia and industry. For readers who are novices in NIR spectroscopy, this book provides a good introduction, and for those who already are familiar with the field, it affords an excellent means of strengthening their knowledge about NIR spectroscopy and keeping abreast of recent developments.
