Handbook of Meat Processing Fidel Toldrá, 2010-01-21 This handbook comprehensively presents the current status of the manufacturing of the most important meat products Editor and renowned meat expert Fidel Toldra heads an international collection of meat scientists who have contributed to this essential reference book Coverage is divided into three parts Part one Technologies begins with discussions on meat chemistry biochemistry and quality and then provides background information on main technologies involved in the processing of meat such as freezing cooking smoking fermentation emulsification drying and curing Also included are key chapters on packaging spoilage prevention and plant cleaning and sanitation Part two Products is focused on the description of the manufacture of the most important products including cooked and dry cured hams cooked and fermented sausages bacon canned meat pat restructured meats and functional meat products Each chapter addresses raw materials ingredients and additives processing technology main types of products production data particular characteristics and sensory aspects and future trends Part three Controls offers current approaches for the control of the quality and safety of manufactured meat products with coverage including sensory evaluation chemical and biological hazards including GMOs HACCP and quality assurance This book is an invaluable resource for all meat scientists meat processors R D professionals and product developers Key features Unparalleled international expertise of editor and contributing authors Addresses the state of the art of manufacturing the most important meat products Special focus on approaches to control the safety and quality of processed meats Extensive coverage of production technologies sanitation packaging and sensory evaluation [Handbook of Processed Meats and Poultry Analysis](#) Leo M.L. Nollet, Fidel Toldra, 2008-11-12 Muscle foods include a wide range of processed meats and poultry and therefore represent an important percentage of total worldwide food consumption The sheer volume of products and the variety of processes available makes analyzing them problematic Co Edited by Fidel Toldra Recipient of the 2010 Distinguished Research Award from the American *Handbook of Meat and Meat Processing, Second Edition* Y. H. Hui, 2012-01-11 Retitled to reflect expansion of coverage from the first edition Handbook of Meat and Meat Processing Second Edition contains a complete update of materials and nearly twice the number of chapters Divided into seven parts the book covers the entire range of issues related to meat and meat processing from nutrients to techniques for preservation and extending shelf life Topics discussed include An overview of the meat processing industry The basic science of meat with chapters on muscle biology meat consumption and chemistry Meat attributes and characteristics including color flavor quality assessment analysis texture and control of microbial contamination The primary processing of meat including slaughter carcass evaluation and kosher laws Principles and applications in the secondary processing of meat including breeding curing fermenting smoking and marinating The manufacture of processed meat products such as sausage and ham The safety of meat products and meat workers including sanitation issues and hazard analysis Drawn from the combined efforts of

nearly 100 experts from 16 countries the book has been carefully vetted to ensure technical accuracy for each topic This definitive guide to meat and meat products it is a critical tool for all food industry professionals and regulatory personnel

Handbook of Fermented Meat and Poultry Fidel Toldrá,2008-04-15 An internationally respected editorial team and array of chapter contributors has developed the Handbook of Fermented Meat and Poultry an updated and comprehensive hands on reference book on the science and technology of processing fermented meat and poultry products Beginning with the principles of processing fermented meat and ending with discussions of product quality safety and consumer acceptance the book takes three approaches background and principles product categories and product quality and safety The historical background on the fermentation of meat and poultry products is followed by a series of discussions on their science and technology curing fermentation drying and smoking basic ingredients raw product additives spices and casings and starter cultures Coverage of product categories details the science and technology of making various fermented meat and poultry products from different parts of the world including semidry fermented sausages summer sausage dry fermented sausages salami sausages from other meats and ripened meat products ham Product quality and safety is probably the most important aspect of making fermented meat and poultry because it addresses the question of consumer acceptance and public health safety While a processor may produce a wonderful sausage the product must ultimately satisfy the consumer in terms of color texture taste flavor packaging and so on In the current political and social climate food safety has a high priority Coverage includes issues such as spoilage microorganisms pathogens amines toxins HACCP and disease outbreaks

Advanced Technologies For Meat Processing Leo M.L. Nollet,Fidel Toldra,2006-03-21 In recent years the meat industry has incorporated important technological advances that to this point have not been addressed in a single source Comprehensive and authoritative Advanced Technologies for Meat Processing presents developments concerning the quality analysis and processing of meat and meat products Co Edited by Fidel Toldra Recipient of the 2010 Distinguished Research Award from the American Meat Science Association Featuring contributions from a panel of international experts the book details technologies used in the meat processing chain It describes important processing methodologies such as gene technology automation irradiation hot boning high pressure vacuum salting enzymes starters and bacteriocins The book begins by exploring various production systems that include the use of modern biotechnology automation in slaughterhouses and rapid non destructive on line detection systems It proceeds to describe different new technologies such as decontamination high pressure processing and fat reduction The book then examines functional meat compounds such as peptides and antioxidants and the processing of nitrate free products and dry cured meat products It also discusses bacteriocins that fight against meat borne pathogens and the latest developments in bacterial starters for improved flavor in fermented meats It concludes with a discussion of packaging systems of the final products

Handbook of Meat and Meat Processing ,2012 Preface The consumption of red meat and meat products has a long history in most cultures Meat is

a source of nutrients as well as a sign of wealth in some countries Various techniques have been developed in different parts of the world over the centuries to preserve meat for extended shelf life and enjoyment Even nonedible parts of animals are used for various reasons Thus meat meat products and by products are important to our daily life In the past three decades many books on the science and technology of meats and meat products have been published Many of these books are useful reference texts and well received by professionals in the meat industries academia and the government Meat Science and Applications is one such example It was published in 2001 by the then Marcel Dekker of New York A decade later the current publisher CRC Press is releasing a second edition of the book with a new title Handbook of Meat and Meat Processing The change in title reflects the expansion of coverage in depth and breadth from the first edition as illustrated in the table of contents of this book Apart from updating materials in the first edition the new edition contains 51 chapters instead of 27 This second edition is divided into six parts Part I covers an overview of the meat processing industries in the United States followed by chapters on muscle biology meat composition and chemistry Part II covers meat attributes and characteristics such as color flavor and analyses Part III describes the primary processing of meat including antemortem and postmortem slaughter carcass evaluation religious status and so on Part IV discusses the principles and applications in the secondary processing of meat for example breeding curing and fermentation

Meat Processing Joseph P. Kerry, John F. Kerry, David Ledward, 2002-09-06 Meat is both a major food in its own right and a staple ingredient in many food products With its distinguished editors and an international team of contributors Meat processing reviews research on what defines and determines meat quality and how it can be maintained or improved during processing Part one considers the various aspects of meat quality There are chapters on what determines the quality of raw meat changing views of the nutritional quality of meat and the factors determining such quality attributes as colour and flavour Part two discusses how these aspects of quality are measured beginning with the identification of appropriate quality indicators It also includes chapters on both sensory analysis and instrumental methods including on line monitoring and microbiological analysis Part three reviews the range of processing techniques that have been deployed at various stages in the supply chain Chapters include the use of modelling techniques to improve quality and productivity in beef cattle production new decontamination techniques after slaughter automation of carcass processing high pressure processing of meat developments in modified atmosphere packaging and chilling and freezing There are also chapters on particular products such as restructured meat and fermented meat products With its detailed and comprehensive coverage of what defines and determines meat quality Meat processing is a standard reference for all those involved in the meat industry and meat research Reviews research on what defines and determines meat quality and how it can be measured maintained and improved during processing Examines the range of processing techniques that have been deployed at various stages in the supply chain Comprehensively outlines the new decontamination techniques after slaughter and automation of carcass processing

Meat Products Handbook G

Feiner,2006-09-29 There has long been a need for a comprehensive one volume reference on the main types of processed meat products and their methods of manufacture Based on over twenty years experience in the industry Meat products handbook is designed to meet that need It combines a detailed practical knowledge of processing and ingredients with the scientific underpinning to understand the effect of particular process steps and ingredients on product safety and quality The first part of the book reviews meat composition and its effect on quality together with the role of additives There are chapters on fat protein and other components in meat changes in meat pre and post slaughter and additives such as phosphates salts hydrocolloids proteins carbohydrates and fillers Part two reviews raw materials additives manufacturing processes and representative recipes from around the world for a range of particular meat products It includes chapters on cooked ham and bacon cooked fresh and raw fermented sausages raw fermented and non fermented salami cured air dried products burgers and patties brawn and meat jelly canned and marinated meat The final part of the book discusses quality and safety issues particularly meat microbiology Meat products handbook is a standard reference for R D quality and production managers in meat processing A one volume reference on processed meat products Combines detailed practical knowledge of processing and ingredients with scientific understanding A standard reference for research development quality and production managers in the meat industry *Butchering, Processing, and Preservation of Meat* Frank Getz Ashbrook,2013-09 How To Process Meat From Cattle Hogs Sheep Game Poultry And Fish **The Complete Book on Meat Processing And Preservation with Packaging Technology** NIIR Board of Consultants & Engineers,2005-10-01 Meat was originally processed to preserve it but since the various procedures cause so many changes in texture and flavour it is also a means of adding variety to the diet Processing also provides scope to mix the less desirable parts of the carcass with lean meat and in addition is a means of extending meat supplies by including other foodstuffs such as cereal in the product Food preservation is a method of maintaining foods at a desired level of properties or nature for their maximum benefits Preservation usually involves preventing the growth of bacteria yeasts fungi and other micro organisms although some methods work by introducing bacteria or fungi to the food as well as retarding the oxidation of fats which cause rancidity Today meat is processed with salt colour fixing ingredients and seasonings in order to impart desired palatability traits to intact and comminuted meat products Products intermediate to these categories are sectioned or chunked and formed meats There are various methods for the preservation of meat curing dry curing smoking canning freezing dehydration fat extraction wet or steam rendering etc Meat curing agents include sodium chloride nitrite ascorbate or erythorbate and possibly sodium phosphate sucrose dextrose or corn syrup and seasonings The salt content of processed meats varies 1 to 12% according to the type of product Many intact and comminuted cured meat products are smoked to impart a desirable smoked flavour and colour The smoking process many also include a drying or cooking cycle depending on the product Canned meats may be processed to be commercially sterile or semi preserved The objective of commercial sterilization is to destroy all harmful
