Handbook of Sustainability Science in the Future Walter Leal Filho, Anabela Marisa Azul, Federica Doni, Amanda Lange Salvia, 2023-08-14 Humanity will have to cope with many problems in the coming decades for instance the world population is likely grow to 8.8 billion people by 2035 Also changing climate conditions are negatively affecting the livelihoods of millions of people In particular environmental disasters are causing substantial damages to properties From a social perspective the inequalities between rich and poor nations are becoming even deeper and in many countries conflicts between national and international interest groups are intensifying The above state of affairs suggest that a broader understanding of the trends which may lead to a more sustainable world is needed especially those which may pave the way for future developments In other words we need to pave the way for sustainable futures Consistent with this reality the proposed Encyclopedia of Sustainability Futures aims to identify document and disseminate ideas experiences and visions from scientists member of nongovernmental organisations decision makers industry representatives and citizens on themes and issues which will be important in pursuing sustainable future scenarios In particular the publication will focus on scientific aspects as well as on social and economic ones also considering matters related to financing and infra structures which are important in pursuing a sustainable future The Encyclopedia of Sustainability Futures will involve the contributing authors in line with the principle of co generation from across a wide range of disciplines e.g education and social sciences natural sciences engineering the arts languages etc with papers adopting a long term sustainability perspective with a time horizon until 2050 The focus will be on themes which are felt as important in the future and the chapters are expected to interest and motivate a world audience This book is part of the 100 papers to accelerate the implementation of the UN Sustainable Development Goals initiative

The Routledge Handbook of Waste, Resources and the Circular Economy Terry Tudor, Cleber J.C. Dutra, 2020-12-27 The Handbook introduces contextualises critiques and discusses a range of perspectives associated with the concept of the circular economy These perspectives span an array of subjects including economics environmental policymaking sociology environmental science environmental and industrial engineering management international development and human geography A fundamental underpinning of the Handbook is that it takes account of a wide range of sectors as well as geographical perspectives that incorporate both a Global North and Global South world context This approach is crucial because it is only within such a holistic perspective that the circular economy concept can truly be examined In addition these issues are examined both from a theoretical as well as a practical perspective using real world case studies for illustration Given its wide subject sectoral and geographical areas of focus the Handbook should be of

Building-Construction Design - From Principle to Detail José Luis Moro, 2024-02-19 Construction is the means by which designing architects and engineers transform a design idea into built reality It is from this perspective that the subject of building construction design is dealt with by the architect Jos Luis Moro in three comprehensive volumes Each is dedicated to the methodological physical and functional fundamentals the conception of a constructional solution and finally its implementation in the constructional detail Not only do the three volumes provide extensive content they also ensure the greatest possible clarity in the text and graphics in order to make it easier for learners to access the material Importantly they focus not only on conveying technical and scientific information but also on demonstrating the complex relationships and interactions between design material and construction Great importance was attached to developing consistent overarching and meaningful correlations between the numerous and highly diverse topics covered After an introduction to planning theory topics Volume 1 Fundamentals addresses sustainability issues in the context of constructional design This is followed by a discussion of the most important material related considerations and their consequences for the constructional application of the materials The range of currently available industrial building products is also presented Furthermore the essential requirements and functions that building structures must fulfill from a structural building physics building acoustics and fire protection perspective are examined In closing the book considers questions of durability

Improving Markets for Recycled Plastics Trends, Prospects and Policy Responses OECD, 2018-05-24 Plastics have become one of the most prolific materials on the planet in 2015 we produced about 380 million tonnes of plastics globally up from 2

million tonnes in the 1950s Yet today only 15% of this plastic waste is collected and recycled into secondary plastics globally each year This

Aluminum Upcycled Carl A. Zimring, 2017-03-15 Tracing the benefits and limitations of repurposing aluminum Besides being the right thing to do for Mother Earth recycling can also make money particularly when it comes to upcycling a zero waste practice where discarded materials are fashioned into goods of greater economic or cultural value In Upcycling Aluminum Carl A Zimring explores how the metal s abundance after World War II coupled with the significant economic and environmental costs of smelting it from bauxite ore led to the industrial production of valuable durable goods from salvaged aluminum Beginning in 1886 with the discovery of how to mass produce aluminum the book examines the essential part the metal played in early aviation and the world wars as well as the troubling expansion of aluminum as a material of mass disposal Recognizing that scrap aluminum was as good as virgin material and much more affordable than newly engineered metal designers in the postwar era used aluminum to manufacture highly prized artifacts Zimring takes us on a tour of post 1940s design examining the use of aluminum in cars trucks airplanes furniture and musical instruments from 1945 to 2015 By viewing upcycling through the lens of one material Zimring deepens our understanding of the history of recycling in industrial society He also provides a historical perspective on contemporary sustainable design practices Along the way he challenges common assumptions about upcycling s merits and adds a new dimension to recycling as a form of environmental absolution for the waste related sins of the modern world Raising fascinating questions of consumption environment and desire Upcycling Aluminum is for anyone interested in industrial and environmental history discard studies engineering product design music history or antiques
