Science SOL 9.2- Plants & Animals

Deliverable: Plants and animals have different processes and structures that allow them to carry out Photosynthesis and to photosynthesize and to breathe.

Plants are composed of parts that together accomplish the process of photosynthesis and carry out other functions.

Plant Structure

Plants consist of four main parts that work together to support the plant's growth, development, and survival. These are the root system, stem, leaves, and flowers.

- Root system:** The part of the plant that anchors it to the ground and absorbs water and nutrients from the soil.
- Stem:** The central axis of the plant that supports the leaves and flowers and transports water and nutrients throughout the plant.
- Leaves:** The part of the plant that carries out photosynthesis and transpiration.
- Flowers:** The part of the plant that produces seeds and fruits.

Photosynthesis

Plants use photosynthesis to produce their own food. This process uses the energy of sunlight, water, and carbon dioxide to produce glucose and oxygen. The glucose is used by the plant for energy, and the oxygen is released into the atmosphere.

$\text{Sunlight} + \text{Carbon Dioxide} + \text{Water} \rightarrow \text{Glucose} + \text{Oxygen (and Food)}$

Photosynthesis enables plants to take energy from the sun and convert it into sugar that can be used by organisms.

Flower Structure

Flowers are reproductive structures that are used by plants to produce seeds and fruits. They consist of several parts, including the petals, sepals, stamens, and pistils.

The **petals** are the large, colorful parts of the flower that attract pollinators. The **sepals** are the small, green parts that protect the petals and stamens. The **stamens** are the male reproductive parts of the flower, consisting of the **anther** (which produces pollen) and the **filament** (which supports the anther). The **pistil** is the female reproductive part of the flower, consisting of the **ovary** (which contains the egg cells) and the **style** (which connects the ovary to the stigma).

Plant Reproduction

Plants reproduce by producing seeds and fruits. The seeds contain the genetic information and the nutrients needed for the plant to grow. The fruits protect the seeds and help them to spread.

Plants and animals are not capable of creating their own food. They must get food from other organisms.

Plants and animals are not capable of creating their own food. They must get food from other organisms.
