

Do not turn on an incline. To reduce the possibility of a tip-over, a lift truck must not be driven across an incline.

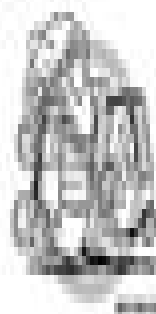

When possible, keep both hands on steering wheel. During most loading or unloading operations, operator steers with the left hand. The right hand is used to operate lift, tilt, and attachment controls.

When turning lift truck from a wide aisle into a narrow aisle, start turn as close to opposite stock pile as safe swing will

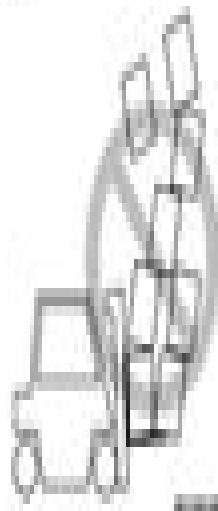

permit. The action permits lift truck to enter narrow aisle going straight ahead.

Load Handling, General

1. The capacity is the maximum load that the lift truck can handle in load condition shown on the Nameplate. The operator must know whether or not a load is within the maximum capacity of lift truck before load is handled.

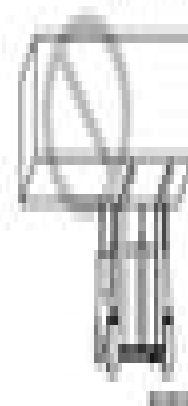

However, factors such as wind force or uneven terrain, loads with a high center of gravity, unevenly distributed loads, or the operator can mean that safe working load is less than capacity shown on Nameplate. When such conditions exist, operator must reduce load so lift truck will remain stable.

⚠ WARNING

Do not handle a load if any lower part of it is above the load backrest or any part of the load is likely to fall.

2. Handle only stable loads. A load can have unstable forms that can easily shift and fall on someone.

⚠ WARNING

If the forkloading pin is not fully engaged, the fork could become unintentionally disengaged.

3. Position each fork the same distance from center of cart/rage. The action will help center load on carriage. Set forks as far apart as possible for maximum support of load. Center weight of load between forks.

If weight of the load is not centered between forks, load can fall from the forks when you turn a corner or hit a bump. An off-center load will increase the possibility of the truck toppling over to the side. Make sure pins that keep forks in position are engaged so that forks cannot move.
