## **Islamic Art And Architecture The System Of Geometric Design:**

*Islamic Art and Architecture* Issam El-Said, Tarek El-Bouri, 1993 Issam El Said pinpoints the rules of composition that form the basis of the geometric concepts of Islamic art. He then shows how intricate patterns are based on these basic principles. Fully illustrated in three colors to show the development of the patterns, this book offers an insight into how craftsmen and designers in the Muslim world achieved monumental feats of artistic expression using the simplest of tools. Chapter I presents graphical analyses of numerous complex patterns to reveal the numerical rationale behind them. In Chapter II the author analyses the system of measure used in ancient Egypt before the use of numbers for calculating measurements. He shows how measuring cords and a geometric method based on a grid pattern originating from the circle were employed by master craftsmen in the design of Islamic art and architecture. The book offers an insight into how craftsmen and designers in the Muslim world have achieved monumental feats of artistic expression with harmony and precision using the simplest of tools such as a ruler, a string and templates together with a system of measure that is both simple and sophisticated.

[Islamic Geometric Patterns](#) Jay Bonner, 2017-08-17. The main focus of this unique book is an in depth examination of the polygonal technique, the primary method used by master artists of the past in creating Islamic geometric patterns. The author details the design methodology responsible for this all but lost art form and presents evidence for its use from the historical record, both of which are vital contributions to the understanding of this ornamental tradition. Additionally, the author examines the historical development of Islamic geometric patterns, the significance of geometric design within the broader context of Islamic ornament as a whole, the formative role that geometry plays throughout the Islamic ornamental arts including calligraphy, the floral idiom, dome decoration, geometric patterns, and more, and the underexamined question of pattern classification. Featuring over 600 beautiful color images, *Islamic Geometric Patterns: Their Historical Development and Traditional Methods of Construction* is a valuable addition to the literature of Islamic art, architecture, and geometric patterns. This book is ideal for students and scholars of geometry, the history of mathematics, and the history of Islamic art, architecture, and culture. In addition, artists, designers, craftspeople, and architects will all find this book an exceptionally informative and useful asset in their fields. Jay Bonner is an architectural ornamentalist and unaffiliated scholar of Islamic geometric design. He received his MDes from the Royal College of Art in London, 1983. He has contributed ornamental designs for many international architectural projects, including the expansion of both the Al

Masjid al Haram Grand Mosque in Mecca and the al Masjid an Nawabi Prophet s Mosque in Medina as well the Tomb of Sheikh Hujwiri in Lahore and the Ismaili Centre in London to name but a few He is committed to the revitalization of Islamic geometric design through the teaching of traditional methodological practices To this end in addition to publishing Jay Bonner has lectured and taught design seminars at many universities and conferences in North America Europe North Africa and Asia

**The Origins of Visual Culture in the Islamic World** Mohammed Hamdouni Alami, 2015-04-17 In tenth century Iraq a group of Arab intellectuals and scholars known as the Ikhwan al Safa began to make their intellectual mark on the society around them A mysterious organisation the identities of its members have never been clear But its contribution to the intellectual thought philosophy art and culture of the era and indeed subsequent ones is evident In the visual arts for example Hamdouni Alami argues that the theory of human proportions which the Ikhwan al Safa propounded something very similar to those of da Vinci helped shape the evolution of the philosophy of aesthetics art and architecture in the tenth and eleventh centuries CE in particular in Egypt under the Fatimid rulers With its roots in Pythagorean and Neoplatonic views on the role of art and architecture the impact of this theory of specific and precise proportion was widespread One of the results of this extensive influence is a historic shift in the appreciation of art and architecture and their perceived role in the cultural sphere The development of the understanding of the interplay between ethics and aesthetics resulted in a movement which emphasised more abstract and pious contemplation of art as opposed to previous views which concentrated on the enjoyment of artistic works such as music song and poetry And it is with this shift that we see the change in art forms from those devoted to supporting the Umayyad caliphs and the opulence of the Abbasids to an art which places more emphasis on the internal concepts of reason and spirituality Using the example of Fatimid art and views of architecture including the first Fatimid mosque in al Mahdiyya Tunisia Hamdouni Alami offers analysis of the debates surrounding the ethics and aesthetics of the appreciation of Islamic art and architecture from a vital time in medieval Middle Eastern history and shows their similarity with aesthetic debates of Italian Renaissance
