Kelemen, 2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific i.e. they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes e.g. CMMI for Development others focus on services e.g. CMMI for Services and again others are related to particular processes such as software testing e.g. TMMi or resource management e.g. People CMM A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards First of all it has to be decided which approaches have potential for the organization In many cases one approach does not contain enough information for process implementation Consequently the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously This area is called Multi model Software Process Improvement MSPI The simultaneous usage of multiple quality approaches is called the multi model problem In this dissertation we propose a solution for the multi model problem which we call the Process Based Unification PBU framework The PBU framework consists of the PBU concept a PBU process and the PBU result We call PBU concept the mapping of quality approaches to a unified process The PBU concept is operationalized by a PBU process The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process Accordingly we addressed the following research question Does the PBU framework provide a solution **ISTQB® Certified Tester Foundation Level** Lucjan Stapp, Adam Roman, Michaël Pilaeten, 2023-11-23 This book is aimed at everyone preparing for the ISTQB Certified Tester Foundation Level exam based on the Foundation Level syllabus version 4.0 published in 2023 It provides candidates with reliable knowledge based on this

document and thus distinguishes itself from all the information about ISTQB syllabi and exams on the Internet which is often of rather poor quality and may even contain serious errors The book expands and details many issues that are described in the new 2023 version of the syllabus in a perfunctory or general way only According to the ISTQB guidelines for syllabus based training an exercise must be provided for each learning objective at the K3 level and a practical example must be provided for each objective at the K2 or K3 level In order to satisfy these requirements the authors prepared numerous exercises and examples for all learning objectives at these levels In addition for each learning objective one or more sample exam questions are presented which are similar to those that the candidate will see in the exam This makes the book an excellent aid for studying and preparing for the exam and verifying acquired knowledge
