Awange,John B. Kyalo Kiema,2013-06-13 There is no doubt that today perhaps more than ever before humanity faces a myriad of complex and demanding challenges These include natural resource depletion and environmental degradation food and water insecurity energy shortages diminishing biodiversity increasing losses from natural disasters and climate change with its associated potentially devastating consequences such as rising sea levels These human induced and natural impacts on the environment need to be well understood in order to develop informed policies decisions and remedial measures to mitigate current and future negative impacts To achieve this continuous monitoring and management of the environment to acquire data that can be soundly and rigorously analyzed to provide information about its current state and changing

patterns and thereby allow predictions of possible future impacts are essential. Developing pragmatic and sustainable solutions to address these and many other similar challenges requires the use of geodata and the application of geoinformatics. This book presents the concepts and applications of geoinformatics, a multidisciplinary field that has at its core different technologies that support the acquisition, analysis, and visualization of geodata for environmental monitoring and management. We depart from the 4D to the 5D data paradigm which defines geodata accurately, consistently, rapidly, and completely in order to be useful without any restrictions in space, time, or scale to represent a truly global dimension of the digital Earth. The book also features the state of the art discussion of Web GIS. The concepts and applications of geoinformatics presented in this book will be of benefit to decision makers across a wide range of fields including those at environmental agencies, in the emergency services, public health, and epidemiology, crime mapping, environmental management agencies, tourist industry, market analysis, and e-commerce, or mineral exploration among many others. The title and subtitle of this textbook convey a distinct message. Monitoring, the passive part in the subtitle, refers to observation and data acquisition, whereas management, the active component, stands for operation and performance. The topic is our environment, which is intimately related to geoinformatics. The overall message is all the mentioned elements do interact and must not be separated.

Hans Peter Bahr, Prof. Dr.-Ing. Dr. h.c. Karlsruhe Institute of Technology (KIT), Germany      **Global Navigation Satellite System Monitoring of the Atmosphere**

Guergana Guerova, Tzvetan Simeonov, 2021-09-11. Global Navigation Satellite System (GNSS) monitoring of the atmosphere is an interdisciplinary topic, a collaboration between geodetic and atmospheric communities. As such, this topic requires sufficient basic knowledge about both GNSS and the atmosphere. Global Navigation Satellite System Monitoring of the Atmosphere begins by introducing GNSS, its components, and signals. It then explains the basics of the atmosphere, starting from the ionosphere to the troposphere. The GNSS tropospheric monitoring is separated for application in numerical weather prediction and nowcasting. Further chapters focus on the application of GNSS for monitoring the climate as well as soil moisture. Finally, the book concludes by discussing GNSS processing along with introducing the latest developments and applications for using atmospheric data to provide precise real-time GNSS products. Explains the basics of GNSS positioning and signals. Includes the state of the art in GNSS observations of the atmosphere and hydrosphere. Presents the basics of numerical weather prediction and analysis.      *China Satellite Navigation Conference (CSNC) 2020 Proceedings: Volume I*

**Environmental Geoinformatics** Joseph Awange,John Kiema,2018-12-08 This second edition includes updated chapters from the first edition as well as five additional new chapters Light detection and ranging LiDAR CORONA historical declassified products Unmanned Aircraft Vehicles UAVs GNSS reflectometry and GNSS applications to climate variability shifting the main focus from monitoring and management to extreme hydro climatic and food security challenges and exploiting big data Since the publication of first edition much has changed in terms of technology and the demand for geospatial data has increased with the advent of the big data era For instance the use of laser scanning has advanced so much that it is unavoidable in most environmental monitoring tasks whereas unmanned aircraft vehicles UAVs drones are emerging as efficient tools that address food security issues as well as many other contemporary challenges Furthermore global navigation satellite systems GNSS are now responding to challenges posed by climate change by unravelling the impacts of teleconnection e g ENSO as well as advancing the use of reflected signals GNSS reflectometry to monitor e g soil moisture variations Indeed all these rely on the explosive use of big data in many fields of human endeavour Moreover with the ever increasing global population intense pressure is being exerted on the Earth s resources leading to significant changes in its land cover e g deforestation diminishing biodiversity and natural habitats dwindling fresh water supplies and changing weather and climatic patterns e g global warming changing sea level Environmental monitoring techniques that

provide information on these are under scrutiny from an increasingly environmentally conscious society that demands the efficient delivery of such information at a minimal cost Environmental changes vary both spatially and temporally thereby putting pressure on traditional methods of data acquisition some of which are highly labour intensive such as animal tracking for conservation purposes With these challenges conventional monitoring techniques particularly those that record spatial changes call for more sophisticated approaches that deliver the necessary information at an affordable cost One direction being pursued in the development of such techniques involves environmental geoinformatics which can act as a stand alone method or complement traditional methods
