Sisson, Yanan Fan, Mark

Beaumont, 2018-09-03 As the world becomes increasingly complex so do the statistical models required to analyse the challenging problems ahead For the very first time in a single volume the Handbook of Approximate Bayesian Computation ABC presents an extensive overview of the theory practice and application of ABC methods These simple but powerful statistical techniques take Bayesian statistics beyond the need to specify overly simplified models to the setting where the model is defined only as a process that generates data This process can be arbitrarily complex to the point where standard Bayesian techniques based on working with tractable likelihood functions would not be viable ABC methods finesse the problem of model complexity within the Bayesian framework by exploiting modern computational power thereby permitting approximate Bayesian analyses of models that would otherwise be impossible to implement The Handbook of ABC provides illuminating insight into the world of Bayesian modelling for intractable models for both experts and newcomers alike It is an essential reference book for anyone interested in learning about and implementing ABC techniques to analyse complex models in the modern world Handbook of Measurement Error Models Grace Y. Yi, Aurore Delaigle, Paul

Gustafson, 2021-10-17 Measurement error arises ubiquitously in applications and has been of long standing concern in a variety of fields including medical research epidemiological studies economics environmental studies and survey research While several research monographs are available to summarize methods and strategies of handling different measurement error problems research in this area continues to attract extensive attention The Handbook of Measurement Error Models provides overviews of various topics on measurement error problems It collects carefully edited chapters concerning issues of measurement error and evolving statistical methods with a good balance of methodology and applications It is prepared for readers who wish to start research and gain insights into challenges methods and applications related to error prone data It also serves as a reference text on statistical methods and applications pertinent to measurement error models for researchers and data analysts alike Features Provides an account of past development and modern advancement concerning measurement error problems Highlights the challenges induced by error contaminated data Introduces off the shelf methods for mitigating deleterious impacts of measurement error Describes state of the art strategies for conducting in depth research

Case Studies in Bayesian Statistical Modelling and Analysis Clair L. Alston, Kerrie L. Mengersen, Anthony N. Pettitt, 2012-10-10 Provides an accessible foundation to Bayesian analysis using real world models This book aims to present an introduction to Bayesian modelling and computation by considering real case studies drawn from diverse fields spanning ecology health genetics and finance Each chapter comprises a description of the problem the corresponding model

the computational method results and inferences as well as the issues that arise in the implementation of these approaches. Case Studies in Bayesian Statistical Modelling and Analysis illustrates how to do Bayesian analysis in a clear and concise manner using real world problems. Each chapter focuses on a real world problem and describes the way in which the problem may be analysed using Bayesian methods. Features approaches that can be used in a wide area of application such as health, the environment, genetics, information science, medicine, biology, industry and remote sensing. Case Studies in Bayesian Statistical Modelling and Analysis is aimed at statisticians, researchers and practitioners who have some expertise in statistical modelling and analysis and some understanding of the basics of Bayesian statistics but little experience in its application. Graduate students of statistics and biostatistics will also find this book beneficial.

Handbook of Methods for Designing, Monitoring, and Analyzing Dose-Finding Trials John O'Quigley, Alexia Iasonos, Björn Bornkamp, 2017-04-27

Handbook of Methods for Designing Monitoring and Analyzing Dose Finding Trials gives a thorough presentation of state of the art methods for early phase clinical trials. The methodology of clinical trials has advanced greatly over the last 20 years and arguably nowhere greater than that of early phase studies. The need to accelerate drug development in a rapidly evolving context of targeted therapies, immunotherapy, combination treatments and complex group structures has provided the stimulus to these advances. Typically we deal with very small samples, sequential methods that need to be efficient while at the same time adhering to ethical principles due to the involvement of human subjects. Statistical inference is difficult since the standard techniques of maximum likelihood do not usually apply as a result of model misspecification and parameter estimates lying on the boundary of the parameter space. Bayesian methods play an important part in overcoming these difficulties but nonetheless require special consideration in this particular context. The purpose of this handbook is to provide an expanded summary of the field as it stands and also through discussion provide insights into the thinking of leaders in the field as to the potential developments of the years ahead. With this goal in mind we present:

- An introduction to the field for graduate students and novices.
- A basis for more established researchers from which to build.
- A collection of material for an advanced course in early phase clinical trials.
- A comprehensive guide to available methodology for practicing statisticians on the design and analysis of dose finding experiments.
- An extensive guide for the multiple comparison and modeling MCP Mod.
- Dose finding approach.
- Adaptive two stage designs for dose finding as well as dose time response models and multiple testing in the context of confirmatory dose finding studies.

John O'Quigley is a professor of mathematics and research director at the French National Institute for Health and Medical Research based at the Faculty of Mathematics, University Pierre and Marie Curie in Paris, France. He is author of Proportional Hazards Regression and has published extensively in the field of dose finding. Alexia Iasonos is an associate attending biostatistician at the Memorial Sloan Kettering Cancer Center in New York. She has over one hundred publications in the leading statistical and clinical journals on the methodology and design of early phase clinical trials. Dr Iasonos has wide experience in the actual implementation of model based early phase trials and has

given courses in scientific meetings internationally Björn Bornkamp is a statistical methodologist at Novartis in Basel Switzerland researching and implementing dose finding designs in Phase II clinical trials He is one of the co developers of the MCP Mod methodology for dose finding and main author of the DoseFinding R package He has published numerous papers on dose finding nonlinear models and Bayesian statistics and in 2013 won the Royal Statistical Society award for statistical excellence in the pharmaceutical industry
