Handbook of Plant and Animal Toxins in Food Gulzar Ahmad Nayik, Jasmeet Kour, 2022-04-18 The prevalence of naturally occurring toxins in plant and animal foods represents one of the most significant food safety issues drawing the attention of both scientists and regulators alike This unexplored area related to food quality is indeed a big concern for consumers various regulatory authorities and food industries Apart from essential nutrients several food crops are capable of producing a vast array of nonnutritious secondary metabolic products These toxins produced as secondary metabolites have the potential to exhibit both beneficial and deleterious effects in both human beings and animals Nevertheless there has been huge progress in agricultural practices and food processing technologies but still the number of nonnutritive substances and naturally derived toxins persist in our diet Handbook of Plant and Animal Toxins in Food Occurrence Toxicity and Prevention focuses on various selected toxins in foods derived from plants as well as animals The prominent plant toxins include solanine and chaconine mushroom toxins phytates tannins oxalates goitrogens gossypol phytohemagglutinins erucic acid saponins cyanogenic glycosides enzyme inhibitors BOAA lathrogens toxic amino acids and toxic fatty acids The prominent animal toxins covered in the book include various seafood toxins shellfish toxins and biogenic amines Key Features Presents complete information about a plethora of toxins Provides quick and easy access to data on major plant and animal toxins Covers distribution of toxins in the plant and animal kingdom Provides comprehensive information on chemistry safety and precautions of each toxin Commencing with a brief introduction of food toxins this book is designed in such a way that the readers will be introduced to toxicity safety and occurrence of each toxin selected It also discusses the in depth detailed information on food poisoning and its prevention The book will also shed light on foodborne illness associated with toxins The primary audience for this work will be food scientists food toxicologists university scholars and college students Furthermore the book will be of immense help for public health officials pharmacologists and food safety officers who are involved with enforcing regulations meant to ensure the safety of a particular food

Hematopoietic Stem Cell Transplantation Research Advances Karl B. Neumann, 2008 Hematopoietic stem cell transplantation HSCT is the transplantation of blood stem cells derived from the bone marrow that is bone marrow transplantation or blood Stem cell transplantation is a medical procedure in the fields of haematology and oncology most often performed for people with diseases of the blood bone marrow or certain types of cancer Stem cell transplantation was pioneered using bone marrow derived stem cells by a team at the Fred Hutchinson Cancer Research Center from the 1950s through the 1970s led by E Donnall Thomas whose work was later recognised with a Nobel Prize in Physiology and Medicine Thomas work showed that

bone marrow cells infused intravenously could repopulate the bone marrow and produce new blood cells His work also reduced the likelihood of developing a life threatening complication called Graft versus host disease With the availability of the stem cell growth factors GM-CSF and G-CSF most hematopoietic stem cell transplantation procedures are now performed using stem cells collected from the peripheral blood rather than from the bone marrow Collecting stem cells provides a bigger graft and does not require that the donor be subjected to general anaesthesia to collect the graft Hematopoietic stem cell transplantation remains a risky procedure with many possible complications it has always been reserved for patients with life threatening diseases This book presents recent leading research in the field
