Bandani, 2012-04-11 Crop losses by pests insects diseases and weeds are as old as plant themselves but as agriculture are intensified and cropping patterns including the cultivation of high yielding varieties and hybrids are changing over time the impact of the pests becoming increasingly important Approximately less than 1000 insect species roughly 600 800 species 1500 2000 plant species numerous fungal bacterial and nematode species as well as viruses are considered serious pests in agriculture If these pests were not properly controlled crop yields and their quality would drop considerably In addition production costs as well as food and fiber prices are increased The current book is going to put Plant Protection approaches in perspective **Lectins** Nathan Sharon, H. Lis, 2007-11-03 This is the second edition of our little red book Lectins

published in 1989 In the intervening years well over 10 000 articles have appeared with lectins as the main subject and more than twice as many in which they were touched upon as well as around 20 books In particular great strides have been made in several areas of lectin research about which little was known until the late 1980s One prominent example is animal lectins many of which have been discovered only during the last decade and the functions of several of which have been clarified especially as to their key role in innate immunity Another is the structure of lectins and of their combining sites Thus whereas at that time the three dimensional structures of just three lectins and a few of their complexes with sugars had been elucidated their numbers have increased to about 160 and over 200 respectively and continue to grow unabated Updating the information on these and other topics resulted in a marked expansion of the book which is now nearly four times as long as the first edition with 226 figures and 39 tables Still a few topics such as carbohydrate binding cytokines or bacterial toxins that are sometimes considered as lectins have been dealt with only in passing Similarly to the first edition Lectins II starts with an overview of the history of lectin research

Eating Ourselves Sick Louise Stephen,2017-01-31 Louise Stephen s powerful no holds barred demolition of Big Food dissects the profit motive that has filled our food supply with toxic oils and sugar and shows us how money is destroying our health DAVID GILLESPIE Our diet has changed radically in the space of 100 years We have swapped home cooked food made with whole ingredients for processed food made from sugar seed oils and refined wheat Modern day food is cheap convenient and accessible but also hugely destructive to our health Former business consultant Louise Stephen developed an autoimmune disease in her early thirties which led to renal failure and a kidney transplant As a middle class professional from a wealthy Western country she was perplexed as to how she had become so ill She started to investigate using her business and research skills to find out what she could about diet and how it relates to health What she uncovered will change the way you think about processed food frozen dinners breakfast cereals packaged snacks dips flavoured drinks bottled sauces and the industry that is profiting from the commodification and toxication of our food supply Stephen shows us how Big Food is picking up where Big Tobacco left off employing skilful marketing to nudge us towards increasingly processed food while hoping we ll fail to notice the commensurate rise in obesity and decline in health Stephen reveals how governments and peak health bodies are often powerless to intervene and even worse are sometimes complicit in convincing us to ditch our wholefood ingredients for factory made products This is not a diet book Meticulously researched and compellingly argued *Eating Ourselves Sick* shines a light on the powerful forces that stand between us and a healthy diet

Handbook of Plant and Animal Toxins in Food Gulzar Ahmad Nayik,Jasmeet Kour,2022-04-18 The prevalence of

naturally occurring toxins in plant and animal foods represents one of the most significant food safety issues drawing the attention of both scientists and regulators alike This unexplored area related to food quality is indeed a big concern for consumers various regulatory authorities and food industries Apart from essential nutrients several food crops are capable of producing a vast array of nonnutritious secondary metabolic products These toxins produced as secondary metabolites have the potential to exhibit both beneficial and deleterious effects in both human beings and animals Nevertheless there has been huge progress in agricultural practices and food processing technologies but still the number of nonnutritive substances and naturally derived toxins persist in our diet Handbook of Plant and Animal Toxins in Food Occurrence Toxicity and Prevention focuses on various selected toxins in foods derived from plants as well as animals The prominent plant toxins include solanine and chaconine mushroom toxins phytates tannins oxalates goitrogens gossypol phytohemagglutinins erucic acid saponins cyanogenic glycosides enzyme inhibitors BOAA lathyrogens toxic amino acids and toxic fatty acids The prominent animal toxins covered in the book include various seafood toxins shellfish toxins and biogenic amines Key Features Presents complete information about a plethora of toxins Provides quick and easy access to data on major plant and animal toxins Covers distribution of toxins in the plant and animal kingdom Provides comprehensive information on chemistry safety and precautions of each toxin Commencing with a brief introduction of food toxins this book is designed in such a way that the readers will be introduced to toxicity safety and occurrence of each toxin selected It also discusses the in depth detailed information on food poisoning and its prevention The book will also shed light on foodborne illness associated with toxins The primary audience for this work will be food scientists food toxicologists university scholars and college students Furthermore the book will be of immense help for public health officials pharmacologists and food safety officers who are involved with enforcing regulations meant to ensure the safety of a particular food

Studies in Natural Products Chemistry Fatima Clement John, Khatija Tabbasum, Chebrolu P. Rao, 2013-06-25 The discovery of lectins a class of carbohydrate binding proteins dates back to 1888 when Stillmark first noticed a hemagglutinating factor in castor bean extracts Ever since the field of lectins has been steadily growing as new lectins with unique binding specificities are being discovered from various sources Moreover newer technologies and synthetic approaches have helped unravel unknown aspects of lectins that have potential for the use of these proteins in biomedicine and biomaterial sciences Lectins are by the new definition proteins with the presence of at least one noncatalytic domain that binds reversibly to a specific carbohydrate The ability of lectins to bind carbohydrate moieties of glycoprotein and glycolipid cell surface receptors often results in important biological events They also bind various glycoses and or glycoconjugates including certain drugs a potential that can be used in prophylaxis of disease As a result of these findings studies on lectins have escalated from both chemical and biological points of view and it is difficult to keep track of the new discoveries and developments in this field in order to reap their benefits and develop the science and the emerging technology from them Therefore this review deals with the new discoveries and key developments

in the field of lectins especially with reference to their isolation structure elucidation and their chemico biological applications including those in drug discovery and medicine Lectins have been isolated from various sources including plant viral bacterial fungal and animal However the most well studied class of lectins is the plant lectins followed by fungal ones Plant lectins have been shown to possess antitumor and anticarcinogenic activity Like the antitumor drugs that trigger the apoptotic death of tumor cells plant lectins have also shown cytotoxic effects mediated via apoptosis During the last decade there has been a growing interest in lectins which exhibit anticancer activities A few kinds of plant lectins have been identified that induce apoptosis activity in tumor cells for example mistletoe *Viscum album* L Interaction of lectins with cells is also known to induce mitogenicity As lectins are specific to certain carbohydrates they are very often able to distinguish between normal and cancer cells and can be used in targeted delivery of organic or inorganic drugs to certain cancer cells and bring about their destruction a potential that needs to be exploited to its fullest extent Therefore this chapter attempts to put into meaningful perspective the latest information available on lectins which includes practical aspects of isolation structure elucidation and lectin drug interactions and the structure activity relationship of lectins that helps us to understand how their activity can be optimized Many lectins studied to date have numerous biological activities of which some may have applicability in the biomedical industry Advancements in computational and bioinformatics studies and efficient screening mechanisms available in the pharmaceutical industries to pick out the most efficient of these proteins and turn them into drugs for medical use have all led to a renewed interest in lectins in drug discovery
