readers will find information pertaining to all aspects of the small satellite industry written by a host of international experts in the field **Image Processing and Data Analysis with ERDAS IMAGINE®** Stacy A.C. Nelson, Siamak Khorram, 2018-10-03

Remotely sensed data in the form of digital images captured from spaceborne and airborne platforms provide a rich analytical and observational source of information about the current status as well as changes occurring in on and around the Earth's surface. The data products or simply images processed from these platforms provide an additional advantage in that geographic areas or regions of interest can be revisited on a regular cycle. This revisit cycle allows geospatial analysts and natural resource managers to explore changing conditions over time. **Image Processing and Data Analysis with ERDAS IMAGINE** explains the principles behind the processing of remotely sensed data in a simple easy to understand and how to format. Organized as a step by step guide with exercises adapted from original research and using publicly available imagery such as NASA Landsat, ESA Sentinel 2 Orthophotos and others, this book gives readers the ability to quickly gain the practical experience needed to navigate the ERDAS IMAGINE software as well as learn certain applications in Esri's ArcMap, ArcGIS for Desktop software and Quantum GIS (QGIS) open source applications package. It also helps readers to easily move beyond the information presented in this book and tackle more advanced skills. Written by two professors with long experience in remote sensing and image processing, this book is a useful guide and reference for both undergraduate and graduate students, researchers, instructors, managers and agency professionals who are involved in the study of Earth systems and the environment.

Geospatial Technologies in Coastal Ecologies Monitoring and Management Kousik Das Malakar, Supriya Roy, Manish Kumar, 2025-07-01

This book contributes to the advancement of scientific knowledge by demonstrating how geospatial technologies can support more effective coastal planning and management. These technologies such as remote sensing, GIS and GNSS play a vital role in monitoring coastal ecosystems and offer powerful tools for data collection, analysis, visualization and decision making. They enhance the understanding of coastal needs and enable more informed and sustainable management strategies. Intended for scientists, professionals, researchers, planners, students and the general public, the book promotes a deeper understanding of how geospatial tools address contemporary coastal challenges. It also emphasizes inclusive decision making and supports the development of strategies for sustainable socio-ecological coastal systems. The book is structured into six parts. Part One introduces the fundamentals of remote sensing including sensor networks, satellite systems, aerial imaging, photogrammetry and air photo interpretation. Part Two covers key GIS concepts, data analysis, database management, digital image processing and participatory GIS. Part Three explores GNSS and GPS techniques. Part Four discusses the application of geospatial tools in coastal ecological monitoring and management. Part Five presents real world case studies and field narratives that explore a range of topics including climatic trend analysis, shoreline dynamics, modelling mangrove canopy health, coastal land use and land cover changes, land surface temperature variations, ecological transformations, mangrove human conflicts, climate adaptation strategies, the management of climate gaps, spatial

considerations in coastal zone management and the role of climate communication in shaping coastal narratives And finally Part Six examines the evolving nature of coastal research highlighting the role of GIScience in transdisciplinary approaches and strategic decision making

Space Fostering Latin American Societies Annette Froehlich, 2022-05-09 This peer reviewed book presents a comprehensive overview of the role space is playing in enabling Latin America to fulfill its developmental aspirations Following on from the highly acclaimed Part 1 and Part 2 it explains how space and its applications can be used to support the development of the full range and diversity of Latin America societies while being driven by Latin American goals The Latin American space sector is currently undergoing a phase of rapid and dynamic expansion with new actors entering the field and with space applications increasingly being used to support the continent's social economic and political development All across Latin America attention is shifting to space as a fundamental part of the continental development agenda and the creation of a Latin American space agency is evidence of this Additionally while in recent years significant advances in economic and social development have lifted many of Latin America's people out of poverty there is still much that needs to be done to fulfill the basic needs of the population and to afford them the dignity they deserve To this end space is already being employed in diverse fields of human endeavor to serve Latin America's goals for its future but there is still a need for further incorporation of space systems and data This book will appeal to researchers professionals and students in fields such as space studies international relations governance and social and rural development

Artificial Intelligence in China Qilian Liang, Wei Wang, Jiasong Mu, Xin Liu, Zhenyu Na, Bingcai Chen, 2020-01-31 This book brings together papers presented at the International Conference on Artificial Intelligence in China ChinaAI 2019 which provided a venue for disseminating the latest advances and discussing the interactions and links between the various subfields of AI Addressing topics that cover virtually all aspects of AI and the latest developments in China the book is chiefly intended for undergraduate and graduate students in Electrical Engineering Computer Science and Mathematics for researchers and engineers from academia and industry and for government employees e.g. at the NSF DOD and DOE

Power, State and Space Marco Aliberti, Ottorino Cappelli, Rodrigo Praino, 2023-07-18 This book explains on what basis a nation can claim the status of space power what are the criteria differentiating a space power from lesser space actors and how their spacepower can be empirically measured and assessed To this end it sets forth a comprehensive multidisciplinary framework to enable a dynamic comparison of space actors and of the pathways that lead them in and out of the space powers club Drawing upon a critical review of the existing literature it conceptualises spacepower as a form of state power based on the complex interplay between the two defining dimensions of stateness namely the well studied dimension of capacity and the often neglected yet exceedingly important dimension of autonomy The book demonstrates that only actors possessing high levels of both autonomy and capacity qualify as space powers Different levels of either capacity or autonomy produce other types of space actors including skilled spacefarers self-reliant spacefarers primed spacefarers

and emerging space actors This innovative conceptual framework is complemented by an in depth comparative assessment that collects and processes a large amount of hard to find data on the most active global space actors and aggregates multiple indicators into a compound non hierarchical index of space power visualised in the form of a matrix
