Completely revised and updated the fifth edition includes new chapters on building commissioning and green buildings. You'll find in depth coverage of every component of effective energy management including boiler and steam system optimization, lighting and electrical systems, HVAC system performance, waste heat recovery, cogeneration, thermal energy storage, energy management control systems, energy systems maintenance, building envelope, industrial insulation, indoor air quality, energy economic analysis, energy procurement, decision making, energy security and reliability, and overall energy management program organization. You'll also get the latest facts on utility deregulation, energy project financing, and in house vs outsourcing of energy services.
