*Handbook Of Sustainability Management* Christian N Madu, Chu-hua Kuei, 2012-03-26 Sustainability is about the effective management of nonrenewable and nonreplenishable natural resources. These resources are limited and critical to maintaining ecological balance. A collective effort is required to balance our socio-economic needs with environmental needs. This could be achieved by re-evaluating policies and actions as to how they affect the environment. Sustainability requires changes in traditional practices of doing things and refocusing ourselves to the needs of the earth. This handbook explores the role of sustainability in achieving social development, environmental protection, and economic development. These three areas constitute what is referred to as the triple bottom line (TBL). Sustainability management may help organizations and their global supply networks to re-evaluate their policies, processes, programs, and projects in terms of triple bottom line. Sustainability helps to facilitate planning, implementing, reviewing, and improving an organization's actions and operations to meet ecological goals.

CAE Design and Failure Analysis of Automotive Composites Srikanth Pilla, 2014-12-03 Composites are now extensively used in applications where outstanding mechanical properties are necessary in combination with weight savings due to their highly tunable microstructure and mechanical properties. These properties present great potential for part integration which results in lower manufacturing costs and faster time to market. Composites also have a high level of styling flexibility in terms of deep drawn panel which goes beyond what can be achieved with metal stampings. The so-called multifunctional or smart composites provide significant benefits to the vehicles as compared to the traditional materials that only have monotonic properties. CAE Design and Failure Analysis of Automotive Composites focuses on the latest use of CAE (Computer Aided Engineering) methods in design and failure analysis of composite materials and structures, beginning with a brief introduction to the design and failure analysis of composite materials and then presenting some recent innovative CAE design examples of composite structures by engineers from major CAE developers and automobile OEMs and suppliers. This title brings together 12 SAE technical papers carefully selected by the editors covering three main areas of expertise: Design and Failure Analysis of Composites, Static Loading, Design and Failure Analysis of Composites, Dynamic and Impact Loading, Design and Failure Analysis of Composites, Blast Loading.
