*What's Making Our Children Sick?* Michelle Perro, Vincanne Adams, 2017 Exploring the links between GM foods glyphosate and gut health With chronic disorders among American children reaching epidemic levels hundreds of thousands of parents are desperately seeking solutions to their children's declining health often with little medical guidance from the experts *What's Making Our Children Sick* convincingly explains how agrochemical industrial production and genetic modification of foods is a culprit in this epidemic Is it the only culprit No Most chronic health disorders have multiple causes and require careful disentanglement and complex treatments But what if toxicants in our foods are a major culprit one that if corrected could lead to tangible results and increased health Using patient accounts of their clinical experiences and new medical insights about pathogenesis of chronic pediatric disorders taking us into gut dysfunction and the microbiome as well as the politics of food science this book connects the dots to explain our kids ailing health *What's Making Our Children Sick* explores the frightening links between our efforts to create higher yield cost efficient foods and an explosion of childhood morbidity but it also offers hope and a path to effecting change The predicament we now face is simple Agroindustrial innovation in a previous era hoped to prevent the ecosystem disaster of DDT predicted in Rachel Carson's seminal book in 1962 *Silent Spring* However this industrial agriculture movement has created a worse disaster a toxic environment and consequently a toxic food supply Pesticide use is at an all time high despite the fact that biotechnologies aimed to reduce the need for them in the first place Today these chemicals find their way into our livestock and food crop industries and ultimately onto our plates Many of these pesticides are the modern day equivalent of DDT However scant research exists on the chemical soup of poisons that our children consume on a daily basis As our food supply environment reels under the pressures of industrialization via agrochemicals our kids have become the walking evidence of this failed experiment *What's Making Our Children Sick* exposes our current predicament and offers insight on the medical responses that are available both to heal our kids and to reverse the compromised health of our food supply

**Are Unions Still Relevant?** Noah Berlatsky, 2013-02-21 The U S Bureau of Labor Statistics states that in 2016 16.3 million American wage and salary workers were represented by a union Statistics correlate that union workers are paid at least 200.00 dollars higher per week than non union workers Unions are specifically created and operated to protect the worker from unfair business practices and improve the quality of life for workers Conversely some unions have such a stronghold on productivity numbers that workers once having met their quota for the day can stop working Big businesses view unions as friends or foe because of their power and ability to change the workplace on behalf of the worker's rights and desires While sheer numbers of membership show that unions are relevant there are several factors left to debate This volume offers the full breadth of perspectives on unions through eyewitness accounts governmental views scientific analysis and newspaper accounts Your readers will be able to use this one source as an excellent research tool Main ideas are copied from the text and repeated as pull quotes so that readers
