ASTM Standardization News American Society for Testing and Materials,2004 **An Approach to Assessing the Technical Feasibility and Market Potential of a New Automotive Device** Rand Zero Emission Fuel Saver Study Team,2007 Save the World Air STWA has developed magnet based devices including its Zero Emission Fuel Saver ZEFS that

it claims can improve vehicle fuel economy and reduce emissions These devices are designed to be fitted as original equipment onto internal combustion engines or to be retrofitted onto existing engines STWA asked the RAND Corporation to help develop a plan for assessing the technical basis required for successful commercialization of ZEFS STWA also sought RAND s advice in examining potential market opportunities for ZEFS This report summarizes RAND s analysis of these two issues concluding the following Application of magnetic fields has not been shown in the literature to lower the viscosity of automotive fuels Along with empirical testing establishing a theoretical basis underlying the effect of magnetic fields on fuel viscosity surface tension and atomization might provide useful information for developing and evaluating magnetic field based fuel treatment devices So far the test results for use of the device are at best mixed Should further laboratory analysis and in use testing provide clearer and more positive outcomes the market potential for the device will depend significantly on the advances realized from other technologies and regulatory policies and on its cost effectiveness relative to other outcomes
