

# Hospital Housekeeping Training Manual

1998

**Editor: Margaret MacLennan, *University of Sydney***

1. The first step is to identify the problem or question that needs to be answered.  
 2. Next, gather relevant information and data from various sources.  
 3. Then, analyze the information to identify patterns and trends.  
 4. After that, develop a hypothesis or a proposed solution.  
 5. Finally, test the hypothesis through experiments or further research.  
 6. The results of the tests should be compared to the original hypothesis.  
 7. If the hypothesis is supported, it can be used to explain the phenomenon.  
 8. If not, a new hypothesis should be developed and tested.  
 9. This process is iterative and often leads to new discoveries.  
 10. The scientific method is a systematic approach to understanding the world.
