Distinctive in its markedly interdisciplinary approach this book presents studies dealing with literary cultural and linguistic history both in Europe and in the US bringing together scholars from different fields while highlighting features that are shared among their contributions It offers new insights into phenomena which have generally been under investigated such as the role played by popular culture music and the arts in the circulation of information in the construction of popular taste and even in scientific popularisation on both sides of the Atlantic As for the choice to focus on the nineteenth century this is dictated by the fact that in those decades for the first time in history scientific technological and social developments accelerated simultaneously It is therefore important to see how such new knowledge was circulated among an ever growing audience by means of different genres and text types bearing in mind that divisions between the literary and non literary were hardly as sharp as they are today The book presents contributions by Robert Louis Abrahamson Nicholas Brownlees Bruno Cartosio Sonia Di Loreto Aileen Dillane Marina Dossena Kirsten Lawson Angela Locatelli William H Mulligan Jr Stefano Rosso and Polina Shvanyukova Miscellaneous Documents United States. Decades of research in the cognitive and learning sciences have led to a growing recognition of the incredibly multi faceted nature of human knowing and learning Up to now this multifaceted nature has been visible mostly in distinct and often competing communities of researchers From a purely scientific perspective siloed science where different traditions refuse to speak with one another or merely ignore one another is unacceptable This ambitious volume attempts to kick start a serious new line of work that merges or properly articulates different traditions

with their divergent historical theoretical and methodological commitments that nonetheless both focus on the highly detailed analysis of processes of knowing and learning as they unfold in interactional contexts in real time Knowledge and Interaction puts two traditions in dialogue with one another Knowledge Analysis KA which draws on intellectual roots in developmental psychology and cognitive modeling and focuses on the nature and form of individual knowledge systems and Interaction Analysis IA which has been prominent in approaches that seek to understand and explain learning as a sequence of real time moves by individuals as they interact with interlocutors learning environments and the world around them The volume s four part organization opens up space for both substantive contributions on areas of conceptual and empirical work as well as opportunities for reflection integration and coordination
