Low-Dimensional Materials, Systems, and Applications, Volume 2 Purushottam Chakraborty, Dambarudhar Mohanta, 2025-10-10. Low Dimensional Materials Systems and Applications Volume 2: Principles, Methods, and Approaches in Biomedicine and Bioengineering showcases the complexities and uniqueness of low-dimensional materials and highlights the most recent discoveries in the fields of biomedicine and bioengineering. Low-dimensional nanoscale materials are challenging as they exhibit properties distinctly different from their bulk counterparts. There is an exponential increase of reactivity at the molecular level due to high surface-to-volume ratios in these materials, and not only are their electronic, optical, and chemical properties different, so too are their mechanical characteristics. This book highlights the state-of-the-art theoretical and experimental descriptions of the complexities, unique properties, and latest applications of low-dimensional materials with a particular focus on the fields of biomedicine and bioengineering. The book is primarily for researchers working on the simulation, fabrication, analysis, and uses of low-dimensional nanoscale materials, including biotechnologists, materials scientists, and chemists. Serves as a comprehensive ready reference for beginners, researchers, and expert practitioners working on the understanding and manipulation of low-dimensional structures in biomedicine and bioengineering. Presents the latest theoretical and experimental approaches and complexities of low-dimensional materials.

Stirling, 2018-01-17 Nanotechnology is changing the world in a very big way but at the atomic and sub atomic level Although the roots of nanotechnology can be traced back to more than a century ago the last three decades have witnessed an explosion of nano based technologies and products This reference work examines the history current status and future directions of nanotechnology through an exhaustive search of the technical and scientific literature The more than 4000 bibliographic citations it includes are carefully organized into core subject areas and a geographic and subject index allows readers to quickly locate documents of interest Although a sense of the global reach and interest in nanotechnology can be gleaned from the reference sections of countless journal articles conference papers and books this is the only reference work providing an in depth global perspective that is ready made for nanotechnology professionals and those interested in learning more about all things nanotechnology Despite the abundance of online resources there is still an urgent need for well researched well presented concise and thematically organized reference works Instead of relying on wiki pages citation aggregators and related websites the author searched the databases and databanks of scholarly literature search providers such as EBSCO ProQuest PUBMED STN International and Thomson Reuters In addition he used select serials related databases to account for pertinent documents from countries in which English is not the primary national language i e China Online Journals e periodica J STAGE and SciELO Brazil among others Cerium Oxide Nanoparticles and Gadolinium Integration Peter Eriksson, 2019-08-29 A challenging task in the area of magnetic resonance imaging is to develop contrast enhancers with built in antioxidant properties Oxidative stress is considered to be involved in the onset and progression of several serious conditions such as Alzheimer s and Parkinson s disease and the possibility to use cerium contained

nanoparticles to modulate such inflammatory response has gained a lot of interest lately. The rare earth element gadolinium is due to its seven unpaired f electrons and high symmetry of the electronic state a powerful element for contrast enhancement in magnetic resonance imaging. Chelates based on gadolinium are the most commonly used contrast agents worldwide. When introducing external contrast agents there is always a risk that it may trigger inflammatory responses, why there is an urgent need for new tailor made contrast agents. Small sized cerium oxide nanoparticles have electronic structures that allows coexistence of oxidation states 3 and 4 of cerium which correlates to applicable redox reactions in biomedicine. Such cerium oxide nanoparticles have recently shown to exhibit antioxidant properties both in vitro and in vivo via the mechanisms involving enzyme mimicking activity. This PhD project is a comprehensive investigation of cerium oxide nanoparticles as scaffold materials for gadolinium integration. Gadolinium is well adopted into the crystal structure of cerium oxide enabling the combination of diagnostic and therapeutic properties into a single nanoparticle. The main focus of this thesis project is to design cerium oxide nanoparticles with gadolinium integration. A stepwise approach was employed as follows: 1 synthesis with controlled integration of gadolinium, 2 material characterization by means of composition, crystal structure, size and size distribution and 3 surface modification for stabilization. The obtained nanoparticles exhibit remarkable antioxidant capability in vitro and in vivo. They deliver strongly enhanced contrast per gadolinium in magnetic resonance imaging compared to commercially available contrast agents. A soft shell of dextran is introduced to encapsulate the cerium oxide nanoparticles with integrated gadolinium which protects and stabilizes the hard core and to increase their biocompatibility. The dextran coating is clearly shown to reduce formation of a protein corona and it improves the dispersibility of the nanoparticles in cell media. Functionalization strategies are currently being studied to endow these nanoparticles with specific tags for targeting purposes. This will enable guidance of the nanoparticles to a specific tissue for high local magnetic resonance contrast complemented with properties for on site reduced inflammation. In conclusion, our cerium oxide nanoparticles with integrated gadolinium exhibit combined therapeutic and diagnostic i.e. theragnostic capabilities. This type of nanomaterial is highly promising for applications in the field of biomedical imaging. **Green**
