Reconfigurable Active and Passive Planar Antennas for Wireless Communication Systems Shibani Kishen Koul, Rajesh K. Singh, 2022-10-14 This book presents state-of-the-art trends in reconfigurable active and passive planar antennas and their applications in wireless communication systems operating in the frequency band 5-6 GHz. Due to various key features such as multifunction antenna design compactness planar nature and low cost these technologies are becoming popular for current and future wireless applications. This book

discusses different novel antenna designs and their working principles in detail The modern and future wireless systems require wideband antennas to accommodate various channels in a single band or in separate bands The carrier aggregation CA has been introduced in the modern wireless systems such as LTE advanced systems and 5G 6G In CA a device can use several channels for transmission and reception The used channels can exist in the same frequency band intra band CA or in distinct bands inter band CA To accommodate more channels more bandwidth is required within the operating band For portable devices circularly polarized CP antennas are more advantageous over linearly polarized antennas since in CP antennas there is low risk of misalignment and hence encountering interference Circularly polarized antenna also provides higher link reliability for the portable devices To provide high data rates more bandwidth is needed to accommodate more channels Various multifunction compact and wideband antennas for plethora of applications are addressed in detail in this book The scope of developing reconfigurable active antennas for application in beam switching beam steering wireless charging security systems etc is described This book concludes by giving glimpses of antenna requirements for future wireless communication systems
