Handbook Of Music And Emotion Theory Research Applications:

Handbook of Music and Emotion Patrik N. Juslin, John Sloboda, 2011-03-17 Music's ability to express and arouse emotions is a mystery that has fascinated both experts and laymen at least since ancient Greece. The predecessor to this book, *Music and Emotion* (OUP, 2001), was critically and commercially successful and stimulated much further work in this area. In the years since publication of that book, empirical research in this area has blossomed, and the successor to *Music and Emotion* reflects the considerable activity in this area. The *Handbook of Music and Emotion* offers an up-to-date account of this vibrant domain. It provides comprehensive coverage of the many approaches that may be said to define the field of music and emotion in all its breadth and depth. The first section offers multidisciplinary perspectives on musical emotions from philosophy, musicology, psychology, neurobiology, anthropology, and sociology. The second section features methodologically oriented chapters on the measurement of emotions via different channels, e.g., self-report, psychophysiology, neuroimaging. Sections three and four address how emotion enters into different aspects of musical behavior, both the making of music and its consumption. Section five covers developmental, personality, and social factors. Section six describes the most important applications involving the relationship between music and emotion. In a final commentary, the editors comment on the history of the field, summarize the current state of affairs, as well as propose future directions for the field. The only book of its kind, *The Handbook of Music and Emotion* will fascinate music psychologists, musicologists, music educators, philosophers, and others with an interest in music and emotion, e.g., in marketing, health, engineering, film, and the game industry. It will be a valuable resource for established researchers in the field, a developmental aid for early career researchers and postgraduate research students, and a compendium to assist students at various levels. In addition, as with its predecessor, it will also attract interest from practising musicians and lay readers fascinated by music and emotion.

Handbook of Music and Emotion : Theory, Research, Applications Patrik N. Juslin, **Music and Emotion** Patrik N. Juslin, John A. Sloboda, 2001 The position of emotion in music has been a subject of considerable interest and debate. However, emotional aspects of music have received surprisingly little attention in the 45 years since the publication of Leonard Meyer's classic work *Emotion and meaning in music*. During that time, both music psychology and emotion have developed as lively areas of research, and the time is fitting therefore to try and bring together this multidisciplinary interest and take stock of what we now know about this important relationship. A new volume in the *Series in Affective Science*, *Music and Emotion: Theory and Research*, brings together leading researchers interested in both these topics to present the first integrative review of this subject. The first section reflects the various interdisciplinary perspectives, taking on board views from philosophy, psychology, musicology, biology, anthropology, and sociology. The second section addresses the role of our emotions in the composition of music, the ways that emotions can be communicated via musical structures, the use of music to express emotions within the cinema. The third section looks at the emotions of the performer: how do they communicate emotion? how does their emotional state affect

their own performance The final section looks at the ways in which our emotions are guided and influenced while listening to music whether actively or passively Music and Emotion is a timely book one that will interest psychologists musicologists music educators and philosophers

Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us and to use this to guide our behavior To accomplish this we make use of numerous cues Among the most important are vocal cues from both speech and non speech sounds Music is also a reliable method for communicating emotion It is often present in social situations and can serve to unify a group s mood for ceremonial purposes funerals

weddings or general social interactions Scientists and philosophers have speculated on the origins of music and language and the possible common bases of emotional expression through music speech and other vocalizations They have found increasing evidence of commonalities among them However the domains in which researchers investigate these topics do not always overlap or share a common language so communication between disciplines has been limited The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music speech and non verbal vocalizations This includes natural sounds produced by human and non human primates as well as synthesized sounds Research methodology includes survey behavioral and neuroimaging techniques investigating adults as well as developmental populations including those with atypical development Studies using laboratory tasks as well as studies in more naturalistic settings are included
