*Teaching History for the Common Good* Keith C. Barton,Linda S. Levstik,2004-07-13 In

Teaching History for the Common Good Barton and Levstik present a clear overview of competing ideas among educators historians politicians and the public about the nature and purpose of teaching history and they evaluate these debates in light of current research on students historical thinking In many cases disagreements about what should be taught to the nation s children and how it should be presented reflect fundamental differences that will not easily be resolved A central premise of this book though is that systematic theory and research can play an important role in such debates by providing evidence of how students think how their ideas interact with the information they encounter both in school and out and how these ideas differ across contexts Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education The authors review research on students historical thinking and set it in the theoretical context of mediated action an approach that calls attention to the concrete actions that people undertake the human agents responsible for such actions the cultural tools that aid and constrain them their purposes and their social contexts They explain how this theory allows educators to address the breadth of practices settings purposes and tools that influence students developing understanding of the past as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools Beyond simply describing the factors that influence students thinking Barton and Levstik evaluate their implications for historical understanding and civic engagement They base these evaluations not on the disciplinary study of history but on the purpose of social education preparing students for participation in a pluralist democracy Their ultimate concern is how history can help citizens engage in collaboration toward the common good In Teaching History for the Common Good Barton and Levstik discuss the contribution of theory and research explain the theory of mediated action and how it guides their analysis and describe research on children s and adults knowledge of and interest in history lay out a vision of pluralist participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students learning explore four principal stances toward history identification analysis moral response and exhibition review research on the extent to which children and adolescents understand and accept each of these and examine how the stances might contribute to or detract from participation in a pluralist democracy address six of the principal tools of history narrative structure stories of individual achievement and motivation national narratives inquiry empathy as perspective taking and empathy as caring and review research and conventional wisdom on teachers knowledge and practice and argue that for teachers to embrace investigative multi perspectival approaches to history they need more than knowledge of content and pedagogy they need a guiding purpose that can be fulfilled only by these approaches and preparation for participatory democracy provides such purpose Teaching History for the Common Good is essential reading for history and social studies professionals researchers teacher educators and students as well as for policymakers parents and members of the general public who are interested in history education or in students thinking and learning about the subject

**Historical Thinking** Sam Wineburg, 2001-03 Since

ancient times the pundits have lamented young people's lack of historical knowledge and warned that ignorance of the past surely condemns humanity to repeating its mistakes. In the contemporary United States this dire outlook drives a contentious debate about what key events nations and people are essential for history students. Sam Wineburg says that we are asking the wrong questions. This book demolishes the conventional notion that there is one true history and one best way to teach it. Although most of us think of history and learn it as a conglomeration of facts, dates, and key figures for professional historians, it is a way of knowing, a method for developing and understanding about the relationships of peoples and events in the past. A cognitive psychologist, Wineburg has been engaged in studying what is intrinsic to historical thinking, how it might be taught, and why most students still adhere to the one damned thing after another concept of history. Whether he is comparing how students and historians interpret documentary evidence or analyzing children's drawings, Wineburg's essays offer rough maps of how ordinary people think about the past and use it to understand the present. Arguing that we all absorb lessons about history in many settings—in kitchen table conversations, at the movies, or on the world wide web—for instance, these essays acknowledge the role of collective memory in filtering what we learn in school and shaping our historical thinking.

*Growing as a Teacher* Clive Beck, Clare Kosnik, 2014-05-12. Teacher learning doesn't end with initial preparation; many insights and skills remain to be added. This book is concerned with ongoing teacher learning, its goals, Part I, and pathways, Part II. It is based on a longitudinal study of 42 teachers: 20 over their first 8 years of teaching and 22 over their first 5 years. The areas of continued teacher learning identified in our study were vision of teaching, program planning, assessment, relevance, subject content, and pedagogy, classroom organization, and community inclusion and professional identity. The pathways of learning included informal and formal PD, teacher inquiry, and school-based learning. A key finding of our research was that over the years teachers learn a great deal informally. However, they do so largely on their own and under considerable stress. Teachers need more support than they currently receive, both for survival and to enhance their informal learning. Teachers can benefit significantly from external input, but their everyday learning makes them key experts in teaching. Accordingly, PD providers should work with teachers, utilizing their existing knowledge. This book is written for consideration by teachers, student teachers, teacher educators, PD providers, policy developers, and others interested in facilitating teacher learning. Some of us have been writing somewhat desperately on these ideas for years. Beck and Kosnik have given us strong evidence that the ideas are effective in practice. I hope this persuasive and beautifully written book will be widely read. Nel Noddings, Lee Jacks, Professor of Education Emerita, Stanford University. This book makes a powerful case for taking teachers' professional development seriously. It brings us the voices of beginning teachers as they deepen their professional knowledge over time and makes clear the depth of commitment they bring to the job. Professor Gemma Moss, Institute of Education, University of London.
