the knowledge economy have to date focused almost exclusively on how managers can increase the internal productivity of their knowledge assets and intellectual capital. The important next step is understanding that a large and rapidly increasing proportion of the value of business transactions is in knowledge itself. Once this is recognized, managers must devote their attention to how to maximize the value of that knowledge to customers and tie that directly to developing enduring and profitable relationships. *Developing Knowledge Based Client Relationships* guides the reader to understanding the increasing importance of information and knowledge in business transactions and client relationships. It then goes on to present in an extremely practical fashion what knowledge organizations can do to enhance the value of the knowledge they deliver to clients and use that to develop profitable relationships. This is done by presenting underlying theoretical framework, a variety of tools for structuring relationships and presenting knowledge to clients, and numerous case studies and examples of firms which have implemented these concepts successfully. Fills a gap in present knowledge literature in the customer knowledge area. Practical tools and effective case studies with world recognized companies. Shows how knowledge organizations of all kinds can increase their competitive edge by adding value to their clients.

Knowledge and Special Libraries Suzanne Connolly, James Matarazzo, 2009-11-03 First Published in 1998 Formerly a library was viewed as a place for information storage and information was viewed as simply bits of data Furthermore many wielded information as a tool of power in that those who had more information had more authority It is becoming increasingly clear that shared collective knowledge of an organization is of far greater value than that of each individual's privately held data In view of the librarian's changing profession it has also become clear that they are now being charged with the mission to explore and implement new and innovative methods to encourage sharing and to better manage information The articles selected for this compendium are well thought out and organized and are drawn from the fields of information and library science and business management Since most special libraries are corporate libraries the selections are taken from these different disciplines to provide perspectives from both a business standpoint and an information management one The selections contain many different predictions about libraries and librarians of the future They focus on new roles and highlight the importance of the profession With the rapid growth of technology end users are being inundated with choices They need expert advice from experienced practitioners Currently much of the literature focuses solely on the management of libraries as opposed to environment in which libraries operate The purpose of this reader is to correct that
