Bonell,L. A. Bruijnzeel,2004 Forests Water and People in the Humid Tropics is the most comprehensive review available of the hydrological and physiological functioning of tropical rain forests the environmental impacts of their disturbance and conversion to other land uses and optimum strategies for managing them The book brings together leading specialists in such diverse fields as tropical anthropology and human geography environmental economics climatology and

meteorology hydrology geomorphology plant and aquatic ecology forestry and conservation agronomy The editors have supplemented the individual contributions with invaluable overviews of the main sections and provide key pointers for future research Specialists will find authenticated detail in chapters written by experts on a whole range of people water land use issues managers and practitioners will learn more about the implications of ongoing and planned forest conversion while scientists and students will appreciate a unique review of the literature

Sustainable Stormwater Management Thomas W. Liptan, 2017-07-26 An essential addition to the landscape design library Nature devises ingenious systems for the management and delivery of water in all its phases No additional infrastructure is required the water systems are in place naturally But once the natural environment has been disrupted by human development stormwater becomes an issue that requires intervention and ongoing management Sustainable Stormwater Management by leading expert Tom Liptan provides landscape students and professionals with a green approach to landscape design The hardworking book includes comprehensive information on how to design install and maintain a landscape for sustainable stormwater management It addresses stormwater in the urban environment relevant environmental and economic policies and shares case studies of exemplary projects from around the world

Regenerative-Adaptive Design for Sustainable Development Phillip B. Roös, 2020-09-15 In this book the author tests a regenerative adaptive pattern language theory towards investigating the possibilities of a holistic integrated design and planning method for sustainable development that incorporates the principles of regenerative design as well as an adaptive pattern language that re-establishes our wholeness with nature and considers the vulnerabilities of a changing landscape The book examines an integral approach to contemporary theories of planning and design that explores

the human nature relationship patterns in social and spatial interconnections between people and their natural environments. The interconnectedness of human and natural systems is used to scaffold possible solutions to address key environmental and sustainability issues that specifically address the need for patterns of behaviour that acknowledge the duality of man and nature. In 12 chapters the book presents a holistic regenerative adaptive pattern language that encapsulates how communities can better appreciate landscape change under future climate effects and acknowledges the importance to adapt to patterns of change of place and the environment and therefore inform the communities responses for sustainable development. The application of the regenerative adaptive pattern language was tested along the Great Ocean Road region of the Victorian coast in Australia. The concluding chapters argue that for human settlements and cities to be resilient and sustainable we must understand the interconnected patterns of human built environments and natural systems and how we function in a social spatial dimension with these. The book is intended for practitioners and academic scholars with interest in sustainable development regenerative design pattern languages biophilia settlement planning and climate change adaptation.

Landscape Architectural Graphic Standards Leonard J. Hopper, 2012-02-24. The new student edition of the definitive reference on landscape architecture. Landscape Architectural Graphic Standards Student Edition is a condensed treatment of the authoritative Landscape Architectural Graphic Standards Professional Edition. Designed to give students the critical information they require, this is an essential reference for anyone studying landscape architecture and design. Formatted to meet the serious student's needs, the content in this Student Edition reflects topics covered in accredited landscape architectural programs, making it an excellent choice for a required text in landscape architecture, landscape design, horticulture, architecture and planning, and urban design programs. Students will gain an understanding of all the critical material they need for the core classes required by all curriculums, including: Construction documentation, Site planning, Professional practice, Site grading and earthwork, Construction principles, Water supply and management, Pavement and structures in the landscape, Parks and recreational spaces, Soils, asphalt, concrete, masonry, metals, wood, and recreational surfaces. Evaluating the environmental and human health impacts of materials. Like Landscape Architectural Graphic Standards, this Student Edition provides essential specification and detailing information on the fundamentals of landscape architecture, including sustainable design principles, planting, including green roofs, stormwater management, and wetlands construction and evaluation. In addition, expert advice guides readers through important considerations such as material life cycle analysis, environmental impacts, site security, hazard control, environmental restoration and remediation, and accessibility. Regenerative Design for Sustainable Development. Winner 1994 Merit Award for Communications, American Society of Landscape Architects. Regenerative Design for Sustainable Development is nothing less than a user's manual for planet Earth that integrates the principles of ecological

design with practical realities better than anything I've read. John Lyle has written the best book now available on the theory and practice of sustainability: essential reading for natural resource professionals, architects, planners, educators, environmentalists, and the general public. David W. Orr, Professor and Chair, Environmental Studies Program, Oberlin College.

John Lyle has written a splendid book, *Regenerative Design for Sustainable Development*. It is perfectly topical; it is committed to the unity of art and science, design and planning, man and nature. It is itself exemplary, and it is a repository of exemplary adaptations. It has carried the environmental movement to a new threshold of ecological planning and design. It should be widely read and employed.

Ian L. McHarg, FASLA. In these times of widespread urban stress and regional disruption, the cogent thoughts of John Tillman Lyle on sustainable cities are on target and highly constructive. They are must reading for planning professionals and all concerned citizens.

John Ormsbee Simonds, FASLA. More designers need to broaden their horizons in the way John Lyle has put forth in this book. In general, there are far too few landscape architects or architects who have any working procedure that approximates what sustainable design entails. This book provides important historical background and contemporary experience to help guide the way.

Pliny Fisk III, Center for Maximum Potential Building Systems. From the despoliation of our rivers and lakes by industrial runoff to the destruction of our atmosphere by sulphur emissions and CFCs, production cycles based on a one-way flow of materials and energy have pushed us to the brink of environmental collapse. It is time for a change, and in this groundbreaking book, John Tillman Lyle offers us a blueprint for implementing that change. This book provides civil engineers, architects, land development planners, and others with practical, realistic approaches to reversing this deadly course. Throughout, the emphasis is on proven regenerative practices for water use, land use, energy use, and building design. Most importantly, it provides ways to reestablish connections between people and nature, between art and science, and between technology and daily life.

Designing for Hope, Dominique Hes, Chrisna du Plessis, 2014-10-17. A forward-looking book on sustainable design that describes problems and then, by providing a different way to conceptualise design and development, leads on to examples of regenerative solutions. Its aim is to move the discussion away from doing less but still detracting from our ecological capital to positively contributing and adding to this capital. This book offers a hopeful response to the often frightening changes and challenges we face, arguing that we can actively create a positive and abundant future through mindful, contributive engagement that is rooted in a living systems-based worldview.

Concepts and practices such as Regenerative Development Biophilic Design Biomimicry Permaculture and Positive Development are explored through interviews and case studies from the built environment to try and answer questions such as How can projects focus on creating a positive ecological footprint and contribute to community How can we as practitioners restore and enrich the relationships in our projects and How does design focus hope and create a positive legacy
