Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that

should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

Designing, Conducting, and Publishing Quality Research in Mathematics Education Keith R. Leatham, 2019-09-12 The purpose of this book is to collect organize and disseminate collective wisdom with respect to designing conducting and publishing quality research in mathematics education This wisdom will be gleaned from among those who over the past several decades have been instrumental in guiding the field in the pursuit of excellence in mathematics education research insightful editors educative reviewers prolific writers and caring mentors Each chapter is written to the novice researcher with the intent of aiding them in avoiding common pitfalls navigating difficult intellectual terrain and understanding that they are not alone in experiencing rejection frustration confusion and doubt This book differs from existing literature in the sense that it is written about the enterprise of designing conducting and publishing research in mathematics education as opposed to being reports of the results of such work It also differs in the sense that it is written with the intent to mentor the rising generation as opposed to capture the state of the field as would happen in a handbook for example It is written for the express purpose of helping the field work collectively to aid in the often isolated enterprise of mentoring new researchers The primary audience is a potentially wide one graduate students novice researchers graduate faculty advisors and mentors or anyone seeking to improve their own abilities to design conduct and publish quality research in mathematics education

Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska, Jeremy Kilpatrick, 2014-02-19 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians common sense or on logic have not resulted in a better understanding of mathematics by more students The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals designs and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally politically and economically justified institutions

namely schools Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology sociology and mathematics Psychological theories focus on the individual learner Theories of sociology of education look at the general laws of curriculum development the specifics of pedagogic discourse as opposed to scientific discourse in general the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society Mathematics aside from its theoretical contents can be looked at from historical and epistemological points of view clarifying the genetic development of its concepts methods and theories This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts
