 Cintula, Carles Noguera, 2022-01-01 This monograph presents a general theory of weakly implicative logics a family covering
 a vast number of non classical logics studied in the literature concentrating mainly on the abstract study of the relationship
 between logics and their algebraic semantics It can also serve as an introduction to abstract algebraic logic both

propositional and first order with special attention paid to the role of implication lattice and residuated connectives and generalized disjunctions Based on their recent work the authors develop a powerful uniform framework for the study of non classical logics In a self contained and didactic style starting from very elementary notions they build a general theory with a substantial number of abstract results The theory is then applied to obtain numerous results for prominent families of logics and their algebraic counterparts in particular for superintuitionistic modal substructural fuzzy and relevant logics The book may be of interest to a wide audience especially students and scholars in the fields of mathematics philosophy computer science or related areas looking for an introduction to a general theory of non classical logics and their algebraic semantics

Petr Hájek on Mathematical Fuzzy Logic Franco Montagna, 2014-09-23 This volume celebrates the work of Petr Hájek on mathematical fuzzy logic and presents how his efforts have influenced prominent logicians who are continuing his work The book opens with a discussion on Hájek's contribution to mathematical fuzzy logic and with a scientific biography of him progresses to include two articles with a foundation flavour that demonstrate some important aspects of Hájek's production namely a paper on the development of fuzzy sets and another paper on some fuzzy versions of set theory and arithmetic Articles in the volume also focus on the treatment of vagueness building connections between Hájek's favorite fuzzy logic and linguistic models of vagueness Other articles introduce alternative notions of consequence relation namely the preservation of truth degrees which is discussed in a general context and the differential semantics For the latter a surprisingly strong standard completeness theorem is proved Another contribution also looks at two principles valid in classical logic and characterize the three main t norm logics in terms of these principles Other articles with an algebraic flavour offer a summary of the applications of lattice ordered groups to many valued logic and to quantum logic as well as an investigation of prelinearity in varieties of pointed lattice ordered algebras that satisfy a weak form of distributivity and have a very weak implication The last part of the volume contains an article on possibilistic modal logics defined over MTL chains a topic that Hájek discussed in his celebrated work *Metamathematics of Fuzzy Logic* and another one where the authors besides offering unexpected premises such as proposing to call Hájek's basic fuzzy logic HL instead of BL propose a very weak system called SL as a candidate for the role of the really basic fuzzy logic The paper also provides a generalization of the prelinearity axiom which was investigated by Hájek in the context of fuzzy logic

Logic, Language, Information, and Computation Lawrence S. Moss, Ruy de Queiroz, Maricarmen Martínez, 2018-06-26 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 25th Workshop on Logic Language Information and Communication WoLLIC 2018 held in Bogotá Colombia in July 2018 The 16 full papers together with 3 short papers and 3 invited talks presented were fully reviewed and selected from 30 submissions The vision for the conference is to provide an annual forum which is large enough to provide meaningful interactions between logic and the sciences related to information and computation

Proof Theory and Algebra in Logic Hiroakira Ono, 2019-08-02 This book offers a concise introduction to both proof theory and algebraic methods the core of the syntactic and semantic study of logic respectively The importance of combining these two has been increasingly recognized in recent years It highlights the contrasts between the deep concrete results using the former and the general abstract ones using the latter Covering modal logics many valued logics superintuitionistic and substructural logics together with their algebraic semantics the book also provides an introduction to nonclassical logic for undergraduate or graduate level courses The book is divided into two parts Proof Theory in Part I and Algebra in Logic in Part II Part I presents sequent systems and discusses cut elimination and its applications in detail It also provides simplified proof of cut elimination making the topic more accessible The last chapter of Part I is devoted to clarification of the classes of logics that are discussed in the second part Part II focuses on algebraic semantics for these logics At the same time it is a gentle introduction to the basics of algebraic logic and universal algebra with many examples of their applications in logic Part II can be read independently of Part I with only minimum knowledge required and as such is suitable as a textbook for short introductory courses on algebra in logic

J. Michael Dunn on Information Based Logics Katalin Bimbo, 2016-04-02 This book celebrates and expands on J Michael Dunn's work on informational interpretations of logic Dunn in his Ph D thesis 1966 introduced a semantics for first degree entailments utilizing the idea that a sentence can provide positive or negative information about a topic possibly supplying both or neither He later published a related interpretation of the logic R mingle which turned out to be one of the first relational semantics for a relevance logic An incompatibility relation between information states lends itself to a definition of negation and it has figured into Dunn's comprehensive investigations into representations of various negations The informational view of semantics is also a prominent theme in Dunn's research on other logics such as quantum logic and linear logic and led to the encompassing theory of generalized Galois logics or gaggles Dunn's latest work addresses informational interpretations of the ternary accessibility relation and the very nature of information The book opens with Dunn's autobiography followed by a list of his publications It then presents a series of papers written by respected logicians working on different aspects of information based logics The topics covered include the logic R mingle which was introduced by Dunn and its applications in mathematical reasoning as well as its importance in obtaining results for other relevance logics There are also interpretations of the accessibility relation in the semantics of relevance and other non classical logics using different notions of information It also presents a collection of papers that develop semantics for various logics including certain modal and many valued logics The publication of this book is well timed since we are living in an information age Providing new technical findings intellectual history and careful expositions of intriguing ideas it appeals to a wide audience of scholars and researchers
