Handbook Of Mathematical Formulas And Integrals Alan Jeffrey:

Handbook of Mathematical Formulas and Integrals Alan Jeffrey, 2014-05-19 If there is a formula to solve a given problem in mathematics you will find it in Alan Jeffrey's Handbook of Mathematical Formulas and Integrals. Thanks to its unique thumb tab indexing feature, answers are easy to find based upon the type of problem they solve. The Handbook covers important formulas, functions, relations, and methods from algebra, trigonometric and exponential functions, combinatorics, probability, matrix theory, calculus, and vector calculus, both ordinary and partial differential equations, Fourier series, orthogonal polynomials, and Laplace transforms. Based on Gradshteyn and Ryzhik's Table of Integrals, Series, and Products, Fifth Edition, edited by Jeffrey but far more accessible and written with particular attention to the needs of students and practicing scientists and engineers, this book is an essential resource. Affordable and authoritative, it is the first place to look for help and a rewarding place to browse. Special thumb tab index throughout the book for ease of use. Answers are keyed to the type of problem they solve. Formulas are provided for problems across the entire spectrum of Mathematics. All equations are sent from a computer-checked source code. Companion to Gradshteyn Table of Integrals, Series, and Products, Fifth Edition. The following features make the Handbook a Better Value than its Competition: Less expensive. More comprehensive. Equations are computer validated with Scientific WorkPlace™ and Mathematica®. Superior quality from one of the most respected names in scientific and technical publishing. Offers unique thumb tab indexing throughout the book which makes finding answers quick and easy.

Handbook of Mathematical Formulas and Integrals Alan Jeffrey, Hui Hui Dai, 2008-01-18 The extensive additions and the inclusion of a new chapter has made this classic work by Jeffrey now joined by co-author Dr H. H. Dai an even more essential reference for researchers and students in applied mathematics, engineering, and physics. It provides quick access to important formulas, relationships between functions, and mathematical techniques that range from matrix theory and integrals of commonly occurring functions to vector calculus, ordinary and partial differential equations, special functions, Fourier series, orthogonal polynomials, and Laplace and Fourier transforms. During the preparation of this edition, full advantage was taken of the recently updated seventh edition of Gradshteyn and Ryzhik's Table of Integrals, Series, and Products and other important reference works. Suggestions from users of the third edition of the Handbook have resulted in the expansion of many sections, and because of the relevance to boundary value problems for the Laplace equation in the plane, a new chapter on conformal mapping has been added, complete with an atlas of useful mappings. Comprehensive coverage in reference form of the branches of mathematics used in science and engineering. Organized to make results involving integrals and functions easy to locate. Results illustrated by worked examples.

Applied Partial Differential Equations: An Introduction Alan Jeffrey, 2003 This work is for students who need more than the purely numerical solutions provided by programs like the MATLAB PDE Toolbox and those obtained by the method of separation of variables.
