Maximum Entropy and Bayesian Methods Garching, Germany 1998 Wolfgang von der Linden, Volker Dose, Rainer Fischer, Roland Preuss, 1999-07-31 In 1978 Edwin T Jaynes and Myron Tribus initiated a series of workshops to exchange ideas and recent developments in technical aspects and applications of Bayesian probability theory The first workshop was held at the University of Wyoming in 1981 organized by C R Smith and W T Grandy Due to its success the workshop was held annually during the last 18 years Over the years the emphasis of the workshop shifted gradually from fundamental concepts of Bayesian probability theory to increasingly realistic and challenging applications The 18th international workshop on Maximum Entropy and Bayesian Methods was held in Garching Munich Germany 27-31 July 1998 Opening lectures by G Larry Bretthorst and by Myron Tribus were dedicated to one of the pioneers of Bayesian probability theory who died on the 30 of April 1998 Edwin Thompson Jaynes Jaynes revealed and advocated the correct meaning of probability as the state of knowledge rather than a physical property This interpretation allowed him to unravel longstanding mysteries and paradoxes Bayesian probability theory the logic of science as E T Jaynes called it provides the framework to make the best possible scientific inference given all available experimental and theoretical information We gratefully acknowledge the efforts of Tribus and Bretthorst in

Trocellier,2012-12-06 The practical properties of many materials are dominated by surface and near surface composition and structure An understanding of how the surface region affects material properties starts with an understanding of the elemental composition of that region Since the most common contaminants are light elements for example oxygen nitrogen carbon and hydrogen there is a clear need for an analytic probe that simultaneously and quantitatively records elemental profiles of all light elements Energy recoil detection using high energy heavy ions is unique in its ability to provide quantitative profiles of light and medium mass elements As such this method holds great promise for the study of a variety of problems in a wide range of fields While energy recoil detection is one of the newest and most promising ion beam analytic techniques it is also the oldest in terms of when it was first described Before discussing recent developments in this field perhaps it is worth reviewing the early days of this century when the first energy recoil detection experiments were reported **Environmental Nanotechnology**
