Decision Analysis Applied to the Field of Environmental Health Dilber Uzun Ozsahin, Berna Uzun, Tamer Sanlidag, James LaMoreaux, 2022-04-01 This book provides students and researchers with a resource that includes the current application of the multi criteria decision theory in a variety of fields including the environment health care engineering and architecture There are many critical parameters criteria that can directly or indirectly affect the consequences of various decisions The application of the multi criteria decision theory focusses mainly on the use of computational methods which include multiple criteria and orders of preference for the evaluation and the selection of the best option among many alternatives based on the desired outcome The theory of multi criteria decision making MCDM is an approach that can be extremely useful for students managers engineers of manufacturing companies etc Behavioral Decision Analysis Florian M. Federspiel, Gilberto Montibeller, Matthias Seifert, 2024-05-30 This book lays out a foundation and taxonomy for Behavioral Decision Analysis featuring representative work across various domains Traditional research in the domain of Decision Analysis has focused on the design and application of logically consistent tools to support decision makers during the process of structuring problem complexity modeling uncertainty generating predictions eliciting preferences and ultimately making better decisions Two commonly held assumptions are that the decision maker's cognitive belief system is fully accessible and that this system can be understood and formalized by trained analysts However in past years an active line of research has emerged studying instances in which such assumptions may not hold This book unites this community under the common theme of Behavioral Decision Analysis The taxonomy used in this book categorizes research based on task focus prediction or decision and behavioral level individual or group Two theoretical lenses that lie at the interface between 1 normative and descriptive research and 2 normative and prescriptive research are introduced The book then proceeds to highlight representative works across the two lenses focused on individual and group level decision making Featuring

various methodologies and applications the book serves as a reference for researchers students and professionals across different disciplines with a common interest in Behavioral Decision Analysis

Generalized Concavity in Fuzzy Optimization and Decision Analysis Jaroslav Ramík, Milan Vlach, 2012-12-06 Convexity of sets in linear spaces and concavity and convexity of functions lie at the root of beautiful theoretical results that are at the same time extremely useful in the analysis and solution of optimization problems including problems of either single objective or multiple objectives Not all of these results rely necessarily on convexity and concavity some of the results can guarantee that each local optimum is also a global optimum giving these methods broader application to a wider class of problems Hence the focus of the first part of the book is concerned with several types of generalized convex sets and generalized concave functions In addition to their applicability to nonconvex optimization these convex sets and generalized concave functions are used in the book's second part where decision making and optimization problems under uncertainty are investigated Uncertainty in the problem data often cannot be avoided when dealing with practical problems Errors occur in real world data for a host of reasons However over the last thirty years the fuzzy set approach has proved to be useful in these situations It is this approach to optimization under uncertainty that is extensively used and studied in the second part of this book Typically the membership functions of fuzzy sets involved in such problems are neither concave nor convex They are however often quasiconcave or concave in some generalized sense This opens possibilities for application of results on generalized concavity to fuzzy optimization Despite this obvious relation applying the interface of these two areas has been limited to date It is hoped that the combination of ideas and results from the field of generalized concavity on the one hand and fuzzy optimization on the other hand outlined and discussed in Generalized Concavity in Fuzzy Optimization and Decision Analysis will be of interest to both communities Our aim is to broaden the classes of problems that the combination of these two areas can satisfactorily address and solve
